Anwendungswarnvermerk

Dieser Entwurf mit Erscheinungsdatum 2024-11-22 wird der Öffentlichkeit zur Prüfung und Stellungnahme vorgelegt.

Weil das beabsichtigte Dokument von der vorliegenden Fassung abweichen kann, ist die Anwendung dieses Entwurfs besonders zu vereinbaren.

Stellungnahmen werden erbeten

— vorzugsweise online im Norm-Entwurfs-Portal von DIN unter www.din.de/go/entwuerfe bzw. für Norm-Entwürfe der DKE auch im Norm-Entwurfs-Portal der DKE unter www.entwuerfe.normenbibliothek.de, sofern dort wiedergegeben;

— oder als Datei per E-Mail an naautomobil@din.de möglichst in Form einer Tabelle. Die Vorlage dieser Tabelle kann im Internet unter www.din.de/go/stellungnahmen-norm-entwuerfe oder für Stellungnahmen zu Norm-Entwürfen der DKE unter www.dke.de/stellungnahme abgerufen werden;

— oder in Papierform an den DIN-Normenausschuss Auto und Mobilität (NAAutomobil), 10004 Berlin, Postfach 8 04 62 oder Behrenstr. 35, 10117 Berlin.

Es wird gebeten, mit den Kommentaren zu diesem Entwurf jegliche relevanten Patentrechte, die bekannt sind, mitzuteilen und unterstützende Dokumentationen zur Verfügung zu stellen.

Gesamtumfang 1628 Seiten

Nationales Vorwort

Das Dokument prEN ISO 15118-4:2024 wurde vom Technischen Komitee ISO/TC 22 „Road vehicles“ in Zusammenarbeit mit dem Technischen Komitee CEN/TC 301 „Straßenfahrzeuge“ erarbeitet, dessen Sekretariat von DIN (Deutschland) gehalten wird.

Das zuständige deutsche Normungsgremium ist der Arbeitsausschuss NA 052-00-31 AA „Datenkommunikation“ im DIN-Normenausschusses Auto und Mobilität (NAAutomobil).

Dieses Dokument enthält unter Berücksichtigung des DIN-Präsidialbeschlusses 1/2004 nur die Englische Fassung von prEN ISO 15118-4:2024.

Das DIN-Präsidium hat mit seinem Beschluss 1/2004 festgelegt, dass von dem in den Regeln der europäischen Normungsarbeit von CEN/CENELEC verankerten Grundsatz, wonach Europäische Normen in den drei offiziellen Sprachen Deutsch, Englisch und Französisch veröffentlicht werden, in begründeten Ausnahmefällen abgewichen und auf die deutsche Sprachfassung verzichtet werden kann.

Die Genehmigung dafür hat die DIN-Geschäftsleitung entsprechend ihren in Anlage 1 zu dem DIN-Rundschreiben A 5/2004 festgelegten Kriterien für die vorliegende Norm auf Antrag des NA 052 NAAutomobil als Ergebnis einer Einzelfallentscheidung erteilt, zumal bereits dieser Norm zugrunde liegende Papiere überwiegend in englischer Sprache auch von den deutschen Marktteilnehmern angewendet werden.

Um den Energieverbrauch von Fahrzeugen zu senken, werden Fahrzeuge mit elektrischem Teil- oder Komplettantrieb entwickelt. Um die Batterien dieser Fahrzeuge aufladen zu können, wird eine spezielle Ladeinfrastruktur benötigt.

Während verschiedene Teilaspekte in der Normung von Elektrofahrzeugen und Infrastruktur bei ISO und IEC bereits behandelt wurden, beschäftigt sich diese Normenreihe mit dem Informationsaustausch zwischen Elektrofahrzeug und Ladeinfrastruktur. Kommunikation ist für das effektive Aufladen von Fahrzeugen sowie die Entwicklung effizienter und komfortabler Abrechnungssysteme unabdingbar.

Dieser Teil der Normenreihe beschreibt spezifische Prüfungen basierend auf den Kommunikationsanforderungen, die in ISO 15118-2 beschrieben sind. Die Norm dient Systemlieferanten als Grundlage, um die Systemkonformität von Kommunikationssteuerungen entweder in Elektrofahrzeugen oder in Ladesäulen nachzuweisen.

Für die in diesem Dokument zitierten Dokumente wird im Folgenden auf die entsprechenden deutschen Dokumente hingewiesen:

IEC 61851-1:2017	siehe	DIN EN IEC 61851-1:2019-12
ISO 15118-1	siehe	DIN EN ISO 15118-1
ISO 15118-2:2014	siehe	DIN EN ISO 15118-2:2016-08
ISO 15118-3	siehe	DIN EN ISO 15118-3
ISO 15118-5	siehe	DIN EN ISO 15118-5

Aktuelle Informationen zu diesem Dokument können über die Internetseiten von DIN (www.din.de) durch eine Suche nach der Dokumentennummer aufgerufen werden.

Änderungen

Gegenüber DIN EN ISO 15118-4:2019-08 wurden folgende Änderungen vorgenommen:

a) Unterabschnitt 7.3.5 wurde gelöscht (Prüfüberwachung);

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

b) Qualität und Lesbarkeit der Bilder wurden gesteigert;

c) allgemeine Fehlerkorrekturen wurden im gesamten Dokument durchgeführt;

d) neue Abschnitte für Zuverlässigkeits- und Belastbarkeitsprüffälle wurden ergänzt (Abschnitt 11 und Anhang E).

Nationaler Anhang NA
(informativ)

Begriffe

Reihenfolge und Inhalt der folgenden Begriffe sind identisch mit denen im Abschnitt Begriffe der Englischen Fassung.

Für die Anwendung dieses Dokuments gelten die Begriffe nach ISO 15118-1, ISO 15118-2, ISO 15118-3 und die folgenden Begriffe.

ISO und IEC stellen terminologische Datenbanken für die Verwendung in der Normung unter den folgenden Adressen bereit:

— ISO Online Browsing Platform: verfügbar unter https://www.iso.org/obp

— IEC Electropedia: verfügbar unter https://www.electropedia.org/

3.1
abstrakter Prüffall
en **abstract test case**
vollständige und unabhängige Spezifikation von Aktionen, die notwendig sind, um ein spezielles *Prüfziel* (3.24) sicherzustellen

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Anmerkung 2 zum Begriff: Diese Spezifikation ist auf dem Abstraktionsniveau für eine bestimmte abstrakte Prüfmethode festgelegt, wobei in einem stabilen Prüfzustand gestartet und in einem stabilen Prüfzustand geendet wird und dabei eine oder mehrere nachfolgende oder gleichzeitige Verbindungen eingebunden sein können.

Anmerkung 3 zum Begriff: Die Spezifikation sollte in der Art und Weise vollständig sein, um ein Prüfurteil zu ermöglichen, welches eindeutig jedem potenziell überwachbaren Prüfergebnis zugeordnet werden kann (d. h. Reihe von Prüfereignissen).

Anmerkung 4 zum Begriff: Die Spezifikation sollte in der Art und Weise unabhängig sein, dass es möglich ist, den abgeleiteten ausführbaren Prüffall isoliert von anderen Prüffällen dieser Art auszuführen (d. h. die Spezifikation sollte immer die Möglichkeit des Startens und Beendens im Zustand „Leerlauf“ beinhalten).

3.2
abstrakte Prüfreihe
ATS, en: abstract test suite
Prüfreihe, die sich aus *abstrakten Prüffällen* (3.1) zusammensetzt, mit Bezug auf eine vorgegebene Anforderungsspezifikation

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.3
Black-Box-Prüfung
en **black box testing**
Prüfverfahren, welches das Verhalten eines *zu prüfenden Systems* (3.20) untersucht, ohne dabei die interne Implementierung und Struktur des *zu prüfenden Systems* zu berücksichtigen und sich somit auf die offenen Prüfschnittstellen am *zu prüfenden System* verlässt

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

3.4
Konformitätsanforderung
en **conformance requirement**
Anforderung an die Implementierung eines realen offenen Systems, von dem behauptet wird, dass es der/den relevanten Spezifikation(en) entspricht, die durch *Black-Box-Prüfungen* (3.3) validiert werden kann

Anmerkung 1 zum Begriff: Die Reihe von zusammenhängenden Konformitätsanforderungen legt das Verhalten des Systems und dessen Kommunikation fest. Konformität eines realen offenen Systems wird deshalb auf zwei Ebenen ausgedrückt: Konformität zu jeder individuellen Anforderung und Konformität zur Reihe. In diesem Dokument umfassen die anwendbaren Konformitätsprüfungen die Anforderungen, soweit sie durch *Black-Box-Prüfungen* (3.3) validiert werden können.

Anmerkung 2 zum Begriff: Siehe auch *statische Konformitätsanforderungen* (3.20) und *dynamische Konformitätsanforderungen* (3.6).

Anmerkung 3 zum Begriff: Die Anforderungen für diese Konformitätsspezifikation sind in ISO 15118-2 festgelegt.

3.5
normgerechte Implementierung
en **conforming implementation**
zu prüfendes System (3.20), das sowohl die *statischen Konformitätsanforderungen* (3.19) als auch die *dynamischen Konformitätsanforderungen* (3.6) erfüllt und das mit den in der *Erklärung zur Konformität der Protokollimplementierung* (3.16) angegebenen Fähigkeiten übereinstimmt

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.6
dynamische Konformitätsanforderung
en **dynamic conformance requirement**
Anforderung, die festlegt, welches überwachbare Verhalten nach der (den) relevanten Spezifikation(en) in Bezug auf die Kommunikation erlaubt ist

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Anmerkung 2 zum Begriff: Die Anforderungen für diese Konformitätsspezifikation sind in ISO 15118-2 festgelegt.

3.7
ausführbarer Prüffall
en **executable test case**
Umsetzung eines *abstrakten Prüffalls* (3.1)

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.8
erwartetes Verhalten
en **expected behavior**
genaue Antwort des *SUT* (3.20), anhand der zugrunde liegenden Protokollspezifikation, auf den Stimulus, der im *Prüfverhalten* (3.21) festgelegt ist

3.9
Konformitätsaussage zur Implementierung
ICS, en: implementation conformance statement
Aussage des Lieferanten einer Implementierung oder eines Systems, von dem behauptet wird, dass es einer vorgegebenen Spezifikation entspricht, die ausdrückt, welche Fähigkeiten implementiert wurden

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Anmerkung 2 zum Begriff: Das vorgegebene Dokument für diese Konformitätsspezifikation ist ISO 15118-2.

3.10
zusätzliche Prüfinformation zur Implementierung
IXIT, en: implementation extra information for testing
Aussage, die von einem Lieferanten oder Umsetzer eines *zu prüfenden Systems* (3.20) getroffen wurde, die alle Informationen (zusätzlich zu den in der *ICS* (3.9) angegebenen) bezogen auf das *zu prüfende System* und dessen Testumgebung beinhaltet oder referenziert und es dem Prüflabor ermöglicht, eine geeignete Prüfreihe gegen das *SUT* durchzuführen

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.11
zu prüfende Implementierung
IUT, en: implementation under test
Implementierung eines oder mehrerer OSI-Protokolle in einer angrenzenden Nutzer-/Anbieter-Beziehung als Teil eines realen offenen Systems, welches durch die Prüfung untersucht wird

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.12
Hauptprüfkomponente
MTC, en: main test component
einzelne Prüfkomponente in einer Prüfkomponentenkonfiguration, verantwortlich für die Erstellung und Steuerung *paralleler Prüfkomponenten* (3.13) sowie für die Berechnung und Zuordnung des *Prüfurteils* (3.30)

Anmerkung 1 zum Begriff: Siehe ITU-T X.292.

3.13
parallele Prüfkomponente
PTC, en: parallel test component
Prüfkomponente, die von der *Hauptprüfkomponente* (3.12) erstellt wurde

Anmerkung 1 zum Begriff: Siehe ITU-T X.292.

3.14
Nachbedingung
en **post-condition**
Prüfschritte, die für die Festlegung des Weges vom Ende des *Prüfverhaltens (3.21)* bis zum finalen stabilen Zustand des *abstrakten Prüffalls* (3.1) benötigt werden

3.15
Vorbedingung
en **pre-condition**
Prüfschritte, die für die Festlegung des Weges vom beginnenden stabilen Zustand des *abstrakten Prüffalls* (3.1) bis zum initialen Zustand, an dem das *Prüfverhalten* (3.21) beginnt, benötigt werden

3.16
Erklärung zur Konformität der Protokollimplementierung
PICS, en: protocol implementation conformance statement
ICS (3.9) für eine Implementierung oder ein System, von dem behauptet wird, dass sie/es einer vorgegebenen Protokollspezifikation entspricht

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Anmerkung 2 zum Begriff: Das vorgegebene Protokolldokument für diese Konformitätsspezifikation ist ISO 15118-2.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Anmerkung 3 zum Begriff: Im Zusammenhang mit diesem Dokument spezifizieren PICS die Konfiguration des Prüfsystems (z. B. welche Prüffälle durchgeführt werden müssen und welche Konfiguration für jeden Prüffall erforderlich ist).

3.17
Zusatzinformation für die Prüfung der Protokollimplementierung
PIXIT, en: protocol implementation extra information for testing
IXIT (3.10), die auf die Konformitätsprüfung nach einer vorgegebenen Protokollspezifikation bezogen ist

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Anmerkung 2 zum Begriff: Das vorgegebene Protokolldokument für diese Konformitätsspezifikation ist ISO 15118-2.

Anmerkung 3 zum Begriff: Im Zusammenhang mit diesem Dokument spezifizieren PIXITs die Konfiguration des *zu prüfenden Systems* (SUT) (z. B. welche Prüffälle durchgeführt werden müssen und welche Konfiguration für jeden Prüffall erforderlich ist).

3.18
Laufzeitumgebung
en **runtime environment**
Umgebung, die das Betriebssystem und entsprechende Plattform-Anforderungen eines Systems beschreibt

BEISPIEL Prüfsystem.

3.19
statische Konformitätsanforderung
en **static conformance requirement**
Anforderung, die festlegt, welche Limitierungen der zulässigen Kombinationen von implementierten Fähigkeiten in einem realen offenen System bestehen, welches mit der (den) relevanten Spezifikation(en) übereinstimmen soll

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Anmerkung 2 zum Begriff: Das vorgegebene Protokolldokument für diese Konformitätsspezifikation ist ISO 15118-2.

3.20
zu prüfendes System
SUT, en: system under test
reales offenes System, das die *IUT* (3.11) beinhaltet

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

3.21
Prüfverhalten
en **test behavior**
Reihe von Prüfschritten (Prüfkörper), die notwendig sind, um den Prüfzweck sicherzustellen und um Urteile den möglichen Ergebnissen zuzuordnen

3.22
Prüfausführung
en **test execution**
Interpretation oder Ausführung einer *abstrakten Prüfreihe* (3.2)

Anmerkung 1 zum Begriff: Konzeptionell kann die Prüfausführung in drei interagierende Einheiten unterteilt werden: eine ausführbare Prüfreihe (ETS, en: executable test suite), einen Prüfrahmen (TFW, en: test framework) und ein optionales internes Kodierungs-/Dekodierungssystem (EDS, en: encoding/decoding system).

Anmerkung 2 zum Begriff: Siehe auch ETSI ES 201 873-5 V4.6.1.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

3.23
Prüfrahmen
TFW, en: test framework
Einheit, die alle Aktionen von *ausführbaren Prüffällen* (3.7) oder Funktionen ausführt

Anmerkung 1 zum Begriff: Der Prüfrahmen interagiert mit den Einheiten Prüfsteuerung (TM, en: test management), SUT-Adapter (SA) und Programmadapter (PA) über die Prüfsteuerungsschnittstelle (TCI, en: test control interface) und die Prüflaufzeitschnittstelle (TRI, en: test runtime interface). Zusätzlich steuert der Prüfrahmen die ausführbare Prüfreihe (ETS) und das Kodierungs-/Dekodierungssystem (EDS). Diese Einheit führt alle notwendigen Aktionen aus, um einen Prüffall oder eine Funktion mit Parametern in der ETS-Einheit ordnungsgemäß auszuführen. Er befragt die Prüfsteuerungseinheit nach Modulparameterwerten, die für die ETS notwendig sind und sendet aufgezeichnete Informationen dorthin. Der Prüfrahmen sammelt und löst zugeordnete Urteile, die von der ETS-Einheit zurückgegeben werden.

Anmerkung 2 zum Begriff: Siehe auch ETSI ES 201 873-5 V4.6.1.

Anmerkung 3 zum Begriff: In diesem Dokument wird das Laufzeitsystem für den Prüfrahmen TTCN-3 verwendet, um eine Prüfrahmen-Funktionalität zu erläutern.

3.24
Prüfziel
en **test purpose**
Prosabeschreibung eines hinreichend festgelegten Prüfziels, welche sich auf eine einzelne *statische Konformitätsanforderung* (3.19) oder *dynamische Konformitätsanforderung* (3.6) oder eine Reihe konzentriert, wie in der entsprechenden OSI-Spezifikation festgelegt

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

BEISPIEL Überprüfung, ob ein spezifischer Wert eines spezifischen Parameters unterstützt wird.

3.25
Prüfsystem
en **test system**
reales System, welches den *Prüfrahmen* (3.23), die *abstrakte Prüfreihe* (3.2), die *Prüfausführung* (3.22) und die Adapter sowie die Codecs umfasst

Anmerkung 1 zum Begriff: Typischerweise beinhaltet es auch eine gemeinsame Laufzeitumgebung, basierend auf einem Betriebssystem.

3.26
Prüfssteuerungsschnittstelle
TCI, en: test control interface
vier Schnittstellen, welche die Interaktion der TTCN-3-Software mit der Prüfsteuerung, die Kodierung und Dekodierung, den Umgang mit den Prüfkomponenten und die Aufzeichnung in einem Prüfsystem festlegen

Anmerkung 1 zum Begriff: Siehe ETSI ES 201 873-6 V4.6.1.

3.27
Prüflaufzeitschnittstelle
TRI, en: test runtime interface
zwei Schnittstellen, welche die TTCN-3-Prüfsystem-Software zwischen dem *zu prüfenden System* (3.20) und dem Programmadapter (PA) sowie dem Systemadapter (SA) in einem *Prüfsystem* (3.25) festlegen

Anmerkung 1 zum Begriff: Siehe ETSI ES 201 873-6 V4.6.1.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

3.28
Prüfsystemschnittstelle
TSI, en: test system interface
Prüfkomponente, welche die Zuordnung der im (abstrakten) TTCN-3-Prüfsystem verfügbaren Ports zu denjenigen bereitstellt, welche von einem realen Prüfsystem angeboten werden

Anmerkung 1 zum Begriff: Siehe ETSI ES 201 873-6 V4.6.1.

3.29
gültiges Prüfverhalten
VTB, en: valid test behavior
Prüfschritte, bei denen das Prüfsystem Stimuli an das *zu prüfende System* (3.20) sendet, die nach den Protokollanforderungen (syntaktisch und semantisch) gültig sind

Anmerkung 1 zum Begriff: Diese Art von Prüfverhalten ist in diesem Dokument festgelegt.

Anmerkung 2 zum Begriff: Die Protokollanforderungen für diese Konformitätsspezifikation sind in ISO 15118-2 festgelegt.

3.30
Urteil
Prüfurteil
en **verdict, test verdict**
Aussage „bestanden“, „fehlgeschlagen“ oder „ergebnislos“, wie in einem *abstrakten Prüffall* (3.1) festgelegt, hinsichtlich der Konformität eines *zu prüfenden Systems* (3.20) bezogen auf diesen Prüffall, wenn dieser gerade ausgeführt wird

Anmerkung 1 zum Begriff: Siehe ITU-T X.290.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 31, *Data communication*.

This second edition cancels and replaces the first edition (ISO 15118-4:2018), which has been technically revised.

The main changes are as follows:

— test control section removed to align with more atomic testing approach (7.3.5 in Ed. 1);

— quality and readability of all Figures improved;

— general error corrections and/or improvements for better consistency in test objective descriptions in Clauses 8, 9 and 10;

— general error corrections and /or improvements for better consistency in TTCN-3 test case specification in the Annexes;

— new clause on configuration of electrical parameters and power flow related data added (7.7.9)

— new clause on reliability and robustness test cases added (Clause 11 and Annex E);

— complete list of new, removed and updated test cases in this document is provided in Annex Q.

A list of all parts in the ISO 15118 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The complexity resulting from the network and application protocol requirements specified in ISO 15118-2 for the Vehicle-to-Grid Communication Interface (V2G CI) requires a considerable amount of testing to enable interoperability between electric vehicles and charging stations. This document therefore specifies a conformance test suite for the network and application layer protocols of the V2G CI to derive a common and agreed basis for conformance tests. The resulting test suite is a prerequisite for downstream interoperability tests. Since interoperability furthermore involves the actual application logic of an implementation those tests are beyond the scope of this document (see NOTE 1). Hence this document focuses on the communication interface and the corresponding requirements given in ISO 15118-2 only.

NOTE 1 Practical limitations make it impossible to specify an exhaustive test suite, and economic considerations can restrict testing even further. Hence, the purpose of this document is to increase the probability that different implementations can interwork. This is achieved by verifying them by means of a protocol test suite, thereby increasing the confidence that each implementation conforms to the protocol specification. However, the specified protocol test suite cannot guarantee conformance to the specification since it detects errors rather than their absence. Thus, conformance to a test suite alone cannot guarantee interworking. What it does do is give confidence that a conforming implementation has the required capabilities and that its behavior conforms consistently in representative instances of communication.

NOTE 2 This document generally refers to system under test (SUT) instead of implementation under test (IUT), due to the black box testing paradigm adopted in this document and related certification processes.

NOTE 3 This document has some interdependencies to the conformance tests specified in ISO 15118-5 which result from ISO/OSI cross layer dependencies in the underlying protocol specification (e.g. for sleep mode).

NOTE 4 Even though ISO 15118-2:2014 references IEC 61851-1:2011 Edition 2, this document references IEC 61851-1:2017 Edition 3 because of applicability on the market.

Road vehicles — Vehicle to grid communication interface — Part 4: Network and application protocol conformance test

1 Scope

This document specifies conformance tests in the form of an abstract test suite (ATS) for a system under test (SUT) implementing an EVCC or SECC according to ISO 15118-2. These conformance tests specify the testing of capabilities and behaviors of an SUT as well as checking what is observed against the conformance requirements specified in ISO 15118-2 and against what the supplier states the SUT implementation's capabilities are.

The capability tests within the ATS check that the observable capabilities of the SUT are in accordance with the static conformance requirements specified in ISO 15118-2. The behavior tests of the ATS examine an implementation as thoroughly as is practical over the full range of dynamic conformance requirements specified in ISO 15118-2 and within the capabilities of the SUT.

A test architecture is described in correspondence to the ATS. The conformance test cases in this document are described leveraging this test architecture and are specified in TTCN-3 core language for ISO/OSI network layer (layer 3) and above. The conformance test cases for the Data Link Layer (layer 2) and physical layer (layer 1) are described in ISO 15118-5. Test cases with overlapping scopes are explicitly detailed.

This document does not include specific tests of other standards referenced within ISO 15118-2, e.g. IETF RFCs. Furthermore, the conformance tests specified in this document do not include the assessment of the performance of an implementation. They cannot provide judgments on the physical realization of abstract service primitives, how a system is implemented, how it provides any requested service, nor the environment of the protocol implementation. Furthermore, the abstract test cases specified in this document only consider the communication protocol specified ISO 15118-2. Power flow between the EVSE and the EV is no prerequisite for the test cases specified in this document.

3 Terms and definitions

For the purpose of this document, the terms and definitions given in ISO 15118-1, ISO 15118-2, ISO 15118-3 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

3.1
abstract test case
complete and independent specification of the actions required to achieve a specific *test purpose* (3.24)

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: This specification is defined at the level of abstraction of a particular abstract test method, starting in a stable testing state and ending in a stable testing state and can involve one or more consecutive or concurrent connections.

Note 3 to entry: The specification is complete in the sense that it is sufficient to enable a test verdict to be assigned unambiguously to each potentially observable test outcome (i.e. sequence of test events).

Note 4 to entry: The specification is independent in the sense that it is possible to execute the derived executable test case in isolation from other such test cases (i.e. the specification always includes the possibility of starting and finishing in the “idle” state).

3.2
abstract test suite
ATS
a collection of *abstract test cases* (3.1) with reference to a given requirement specification

Note 1 to entry: See ITU-T X.290.

 © ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

3.3
black box testing
method of testing that examines the behaviour of a *system under test* (3.20) without considering the internal implementation and structure of the *system under test*, thus relying on the *system under test's* open interface for testing

3.4
conformance requirement
requirement for implementation of a real open system which is claimed to conform to the relevant specification(s) that can be validated by *black box testing* (3.3)

Note 1 to entry: The set of conformance requirements together define the behavior of the system and its communication. Conformance of a real open system is, therefore, expressed at two levels, conformance to each individual requirement and conformance to the set. In this document, applicable conformance tests include requirements as far as they can be validated by *black box testing* (3.3).

Note 2 to entry: See also *static conformance requirements* (3.20) and *dynamic conformance requirements* (3.6).

Note 3 to entry: The requirements for this conformance specification are specified in ISO 15118-2.

3.5
conforming implementation
system under test (3.20) which satisfies both *static conformance requirements* (3.19) and *dynamic conformance requirements* (3.6), consistent with the capabilities stated in the *protocol implementation conformance statements* (3.16)

Note 1 to entry: See ITU-T X.290.

3.6
dynamic conformance requirement
requirement which specifies what observable behavior is permitted by the relevant specification(s) in instances of communication

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: The requirements for this conformance specification are specified in ISO 15118-2.

3.7
executable test case
realization of an *abstract test case* (3.1)

Note 1 to entry: See ITU-T X.290.

3.8
expected behavior
exact response of the SUT (3.20) according to the underlying protocol specification to the stimulus defined in the *test behavior* (3.21)

3.9
implementation conformance statement
ICS
statement made by the supplier of an implementation or system claimed to conform to a given specification, stating which capabilities have been implemented

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: The given document for this conformance specification is ISO 15118-2.

3.10
implementation extra information for testing
IXIT
statement made by a supplier or implementer of a *system under test* (3.20) which contains or references all information [in addition to that given in the *implementation conformance statements* (3.9)] related to the *system under test* and its testing environment, which will enable the test laboratory to run an appropriate test suite against the SUT

Note 1 to entry: See ITU-T X.290.

3.11
implementation under test
IUT
implementation of one or more open system interconnection protocols in an adjacent user/provider relationship, being part of a real open system, which is to be studied by testing

Note 1 to entry: See ITU-T X.290.

3.12
main test component
MTC
single test component in a test component configuration responsible for creating and controlling *parallel test components* (3.13) and computing and assigning the *test verdict* (3.30)

Note 1 to entry: See ITU-T X.292.

3.13
parallel test component
PTC
test component created by the *main test component* (3.12)

Note 1 to entry: See ITU-T X.292.

3.14
post-condition
test steps needed to define the path from the end of the *test behavior* (3.21) up to the finishing stable state for the *abstract test case* (3.1)

3.15
pre-condition
test steps needed to define the path from the starting stable state of the *abstract test case* (3.1)up to the initial state from which the *test bevavior* (3.21) will start

3.16
protocol implementation conformance statement
PICS
implementation conformance statement (3.9) for an implementation or system claimed to conform to a given protocol specification

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: The given protocol document for this conformance specification is ISO 15118-2.

Note 3 to entry: In the context of this document, PICS specify the configuration of the Test System (e.g. what test cases need to be executed and what confiugration is required for each testcase)

© ISO 2024 – All rights reserved
Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

3.17
protocol implementation extra information for testing
PIXIT
implementation extra information for testing (3.10) related to testing for conformance to a given protocol specification

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: The given protocol document for this conformance specification is ISO 15118-2.

Note 3 to entry: In the context of this document, PIXIT specify the configuration of the System under Test (SUT) (e.g. what protocol options are implemented and what confiugration is required for each testcase)

3.18
runtime environment
environment that describes the operating system and corresponding platform requirements of a system

EXAMPLE Test system.

3.19
static conformance requirement
requirement that specifies the limitations on the combinations of implemented capabilities permitted in a real open system which is claimed to conform to the relevant specification(s)

Note 1 to entry: See ITU-T X.290.

Note 2 to entry: The requirements for this conformance specification are specified in ISO 15118-2.

3.20
system under test
SUT
real open system in which the *implementation under test* (3.11) resides

Note 1 to entry: See ITU-T X.290.

3.21
test behavior
set of test steps (test body) which are essential to achieve the test purpose and assign verdicts to the possible outcomes

3.22
test execution
TE
interpretation or execution of an *abstract test suite* (3.2)

Note 1 to entry: Conceptually, the TE can be decomposed into three interacting entities: an Executable Test Suite (ETS), a Test Framework (TFW) and an optional internal Encoding/Decoding System (EDS) entity.

Note 2 to entry: See also ETSI ES 201 873-5 V4.6.1.

3.23
test framework
TFW
an entity to perform all actions of *executable test cases* (3.7) or functions

Note 1 to entry: The Test Framework interacts with the test management, system under test adapter and platform adapter entities via test control interface (TCI) and test runtime interface (TRI). It additionally initializes and manages the executable test suite and encoding/decoding system entities. This entity performs all the actions necessary to properly start the execution of a test case or function with parameters in the executable test suite entity. It queries the test management

Printed copies are uncontrolled

entity for module parameter values required by the executable test suite and sends logging information to it. It also collects and resolves associated verdicts returned by the executable test suite entity.

Note 2 to entry: See also ETSI ES 201 873-5 V4.6.1.

Note 3 to entry: In this document, the test framework TTCN-3 runtime system is used to explain a test framework functionality.

3.24
test purpose
prose description of a well-defined objective of testing, focusing on a single *static conformance requirement* (3.19) or *dynamic conformance requirement* (3.6) or a set as specified in the appropriate OSI specification

Note 1 to entry: See ITU-T X.290.

EXAMPLE Verifying the support of a specific value of a specific parameter.

3.25
test system
real system combining the *test framework* (3.23), *abstract test suite* (3.2), *test execution* (3.22) and adapters as well as codecs

Note 1 to entry: Typically, also containing a common runtime environment based on an operating system.

3.26
test control interface
TCI
four interfaces that define the interaction of the TTCN-3 executable with the test management, the coding and decoding, the test component handling and the logging in a test system

Note 1 to entry: See ETSI ES 201 873-6 V4.6.1.

3.27
test runtime interface
TRI
two interfaces that define the interaction of the TTCN-3 executable between the system under test (3.20) and the platform adapter and the system adapter in a *test system* (3.25)

Note 1 to entry: See ETSI ES 201 873-6 V4.6.1.

3.28
test system interface
TSI
test component that provides a mapping of the ports available in the (abstract) TTCN-3 test system to those offered by a real test system

Note 1 to entry: See ETSI ES 201 873-6 V4.6.1.

3.29
valid test behavior
VTB
test steps where the test system sends stimuli to the *system under test* (3.20) that are valid (syntactically and semantically) according to the protocol requirements

Note 1 to entry: This type of test behavior is specified in this document.

Note 2 to entry: The protocol requirements for this conformance specification are specified in ISO 15118-2.

Printed copies are uncontrolled

3.30
verdict
test verdict
statement of “pass”, “fail” or “inconclusive”, as specified in an *abstract test case* (3.1), concerning conformance of an *system under test* (3.20) with respect to that test case when it is executed

Note 1 to entry: See ITU-T X.290.

4 Abbreviated terms

For the purpose of this document, the following abbreviations apply:

ALM	Application Layer Message
ATS	Abstract Test Suite
BEV	Battery Electric Vehicle
CA	Certificate Authority
CPL	Control Pilot Line
CRL	Certificate Revocation List
DH	Diffie Hellman
DER	Distinguished Encoding Rules
ECDSA	Elliptic Curve Digital Signature Algorithm
EDS	Encoding/Decoding System
EIM	External Identification Means
EMAID	E-Mobility Account Identifier
ETS	Executable Test Suite
EV	Electric Vehicle
EVCC	Electric Vehicle Communication Controller
EVSE	Electric Vehicle Supply Equipment
EXI	Efficient XML Interchange
HAL	Hardware Abstraction Layer
ICS	Implementation Conformance Statement
ID(s)	Identifier(s)
IUT	Implementation under Test
IXIT	Implementation eXtra Information for Testing
OCSP	Online Certificate Status Protocol
OEM	Original Equipment Manufacturer
PWM	Pulse Width Modulation
MTC	Main Test Component
NACK	Negative Acknowledgement
PDU	Protocol Data Unit
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation eXtra Information for Testing
PKI	Public Key Infrastructure
PLC	Power Line Communication
PnC	Plug and Charge
PTC	Parallel Test Component
SA	Secondary Actor
SDP	SECC Discovery Protocol
SECC	Supply Equipment Communication Controller

XML	Extensible Markup Language

5 Conventions

5.1 Requirement structure

This document uses unique number identifiers for each individual requirement. This requirement structure allows for easier requirement tracking and management. The following format is used throughout this document:

"[V2G"Y"-"XXX"]" requirement text

Where:

— **"**V2G**"** represents the ISO 15118 series,

— "Y" represents the document part of the ISO 15118 series, for this document Y = 4

— "XXX" represents the individual requirement number and

— "requirement text" includes the actual text of the requirement.

5.2 Test system description

TTCN-3 is used in this document to specify the test system and the abstract test cases in the abstract test suite. However, using TTCN-3 is not mandatory for the implementation of conformance tests of ISO 15118-2.

[V2G4-001] The implementers of conformance tests shall verify that all test objectives implemented in their environment are identical to those described in this document.

6 Test architecture reference model

6.1 General information

Figure 1 provides an overview on the test architecture for this document. Subclauses 6.2, 6.3 and 6.4 specify the interface requirements in Figure 1 for platform adapters, SUT adapters and all applicable codecs.

© ISO 2024 – All rights reserved
Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Figure 1 — Test architecture reference model for testing of ISO 15118-2

For the scope of this document only the "ISO 15118-2 – Messaging" interface to the SUT and its dependencies to the corresponding "IEC 61851-1:2017, Annex A – PWM Signaling" interface are relevant. This document therefore limits its scope to the respective SUT adapters and codecs.

6.2 Platform adapter interface

The platform adapter within the test system is responsible for timers and external functions. Besides means for timers, which are typically provided as part of the test framework and runtime environment, there are external functions specified for XML security in 7.7.11 and EIM status control functionality in 7.7.12.

[V2G4-002] The platform adapter of the test system shall implement the TriPlatformPA and the TriPlatformTE interfaces as specified in ETSI ES 201 873-5 V4.6.1:2014, 6.5.3.

6.3 SUT adapter interfaces

6.3.1 General information

The SUT adapter within the test system adapts the TTCN-3 communication operations to the SUT based on an abstract test system interface and implements the real test system interface. It is responsible to propagate message requests and procedure-based calls from the test execution (see Figure 1) to the SUT, and to notify the test execution of any received test events by appending them to its port queues.

[V2G4-003] The SUT adapters of the test system shall implement the TriCommunicationSA and the TriCommunicationTE interfaces as specified in ETSI ES 201 873-5 V4.6.1:2014, 6.5.2.

NOTE 1 The actual implementation of these adapters is out of the scope of this document.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

6.3.2 IEC 61851-1 SUT adapter requirements

The IEC 61851-1 SUT adapter implements a parallel test component (PTC) for the control pilot and proximity pilot signalling specified in IEC 61851-1:2017 Annex A. It continuously controls and/or observes the positive voltage (state), frequency, duty cycle and the proximity resistor value during the entire test case execution in accordance with the specified valid range of values as specified in IEC 61851-1:2017, Annex A.

[V2G4-004] The IEC 61851-1 SUT adapter shall adapt the HAL 61851-1 functions to a PWM Signal as specified in 6.3.2.1 to 6.3.2.5.

6.3.2.1 Requirements of IEC 61851-1 SUT adapter for SECC or EVCC testing

[V2G4-022] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a function to get the current PWM state or associated voltage level.

[V2G4-023] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a call-back function which reports change events of the current PWM state or associated voltage level.

[V2G4-024] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a function to set the proximity on SUT side.

[V2G4-025] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a function to get the proximity resistor value from SUT side.

[V2G4-026] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a call-back function which reports change events of the resistor value for the proximity from SUT side.

[V2G4-027] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a function to get the duty cycle in [%].

[V2G4-028] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a call-back function which reports changes of the duty cycle in [%].

[V2G4-029] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a function to get the frequency in [Hz].

[V2G4-030] The IEC 61851-1 SUT adapter for SECC or EVCC testing shall provide a call-back function which reports change events of the frequency in [Hz].

6.3.2.2 Requirements of IEC 61851-1 SUT adapter for SECC testing

[V2G4-031] The IEC 61851-1 SUT adapter for SECC testing shall provide a function to set the current PWM state or associated voltage level. State B, C and D or the associated voltage level shall be supported, other voltage levels are optional.

6.3.2.3 Requirements of IEC 61851-1 SUT adapter for EVCC testing

[V2G4-032] The IEC 61851-1 SUT adapter for EVCC testing shall provide a function to set the current PWM state or associated voltage level. State E and F or the associated voltage level shall be supported, other voltage levels are optional.

[V2G4-033] The IEC 61851-1 SUT adapter for EVCC testing shall provide a function to set the current duty cycle in [%]. The values 5%, and 7%-98% shall be supported, other values are optional.

[V2G4-034] The IEC 61851-1 SUT adapter for EVCC testing shall provide a function to set current frequency in [Hz]. A value of 1000 Hz +/- 5% shall be supported; other values are optional.

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

[V2G4-035] The IEC 61851-1 SUT adapter for EVCC testing shall provide a function to switch on/off the ControlPilot Line to simulate an un-plug or plug-in for the SUT. State A or the associated voltage level shall be supported, other voltage level is optional.

6.3.2.4 Requirements of IEC 61851-1 PTC for SECC or EVCC testing

[V2G4-036] The IEC 61851 PTC for SECC or EVCC testing shall provide a function which activates the validity monitoring as specified in [V2G4-037], [V2G4-038], [V2G4-039], [V2G4-040], [V2G4-041].

[V2G4-037] The IEC 61851-1 PTC for SECC or EVCC testing shall provide a function to confirm a change from/to a given PWM state. This function shall wait for receiving a state change event from IEC 61851-1 SUT adapter. If no change event occurs within a given time [ms], the function shall return an error.

[V2G4-038] The IEC 61851-1 PTC for SECC or EVCC testing shall provide a function to change its valid PWM state condition. This function shall change the internal monitoring condition to a given PWM state, which the IEC 61851-1 PTC will consider as the next valid PWM state.

[V2G4-039] The IEC 61851-1 PTC for SECC or EVCC testing shall provide a function to change its valid duty cycle range. This function shall change the internal monitoring condition to a given duty cycle range from [%] – to [%], which the IEC 61851-1 PTC will consider as the next valid duty cycle range.

6.3.2.5 Requirements of IEC 61851-1 PTC for SECC testing

[V2G4-040] The IEC 61851-1 PTC for SECC testing shall provide a function to confirm a given duty cycle in [%]. This function shall wait for receiving a duty cycle change event from IEC 61851-1 SUT adapter. If no change event occurs within a given time [ms], the function shall report an error.

[V2G4-041] The IEC 61851-1 PTC for SECC testing shall provide a function to change its valid frequency range. This function shall change the internal monitoring condition to a given frequency range from [Hz] – to [Hz], which the IEC 61851-1 PTC will consider as the next frequency range.

6.3.3 ISO 15118-2 SUT adapter requirements

[V2G4-005] The ISO 15118-2 SUT adapter shall adapt and send/receive the encoded SDP requests/responses through UDP messages to/from the SUT as specified in ISO 15118-2:2014, 7.7.2 and 7.10.1.

[V2G4-006] The ISO 15118-2 SUT adapter shall adapt and send/receive the encoded V2G messages through a TCP or TLS connection to/from the SUT as specified in ISO 15118-2:2014, 7.7.1 and 7.7.3.

[V2G4-007] The ISO 15118-2 SUT adapter shall adapt the internal port control messages for TCP and TLS connection management as specified in Annex P.4

NOTE 3 The TCP/TLS connection management includes the following functionalities:

- control for TCP/TLS port disconnection handling;
- control for receiving information / status on a given TCP/TLS connection ;
- notification of TCP/TLS connection status events;
- notification of TLS Handshake status events.

[V2G4-008] The ISO 15118-2 SUT adapter shall provide a port map operation (refer to 7.3.3) with additional parameters for TCP and TLS connection configuration as specified in Annex P.4.

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

NOTE 4 The TCP/TLS connection configuration includes the following functionalities:

- configuration for IP address and port;
- configuration for usage of security (TCP/TLS) ;
- configuration for cipherSuite;
- configuration for TLS protocol version;
- configuration for TLS certificate.

NOTE 5 The ISO 15118-3 adapter is specified in ISO 15118-5.

6.4 Codecs

A codec is responsible for the external encoding and decoding of TTCN-3 values into bit strings suitable to be sent to the SUT. The test execution (TE) determines which codec is used and passes the TTCN-3 data to the appropriate encoder to obtain the encoded data. Received data is decoded in this entity by using the appropriate decoder, which translates the received data into TTCN-3 values cf. ETSI ES 201 873-6 V4.5.1, that can be matched against expected behaviors in the form of templates.

[V2G4-009] All codecs in this document shall implement the TCI-CD interface as specified in ETSI ES 201 873-6 V4.6.1:2014, 7.3.2.

NOTE 1 For ISO 15118-2 conformance testing, three codecs (V2G-EXI, SDP, V2GTP, see Figure 1) are used to encode or decode messages consumable by the test system into bit strings / signals consumable by the SUT.

NOTE 2 The exact implementation of these codecs is out of the scope of this document.

[V2G4-010] The V2G-EXI codec shall encode TTCN-3 values as specified in Annex P.7 into corresponding EXI streams as specified in ISO 15118-2:2014, 7.9.1.

[V2G4-011] The V2G-EXI Security codec shall encode TTCN-3 values for X.509 Certificates as specified in Annex P.7 into a corresponding Base64 representation suitable for EXI streams according to ISO 15118-2:2014, 7.9.1.

[V2G4-012] The V2G-EXI codec shall decode EXI streams as specified in ISO 15118-2:2014, 7.9.1 into TTCN-3 values as specified in Annex P.7.

[V2G4-013] The V2G-EXI Security codec shall decode Base64 representation from EXI streams according to ISO 15118-2:2014, 7.9.1 into TTCN-3 values for X.509 Certificates as specified in Annex P.7.

[V2G4-014] The SDP codec shall encode TTCN-3 values as specified in Annex P.6 into corresponding SDP requests/responses as specified in ISO 15118-2:2014, 7.10.1.3, 7.10.1.4 and 7.10.1.5.

[V2G4-015] The SDP codec shall decode SDP requests/responses as specified in ISO 15118-2:2014, 7.10.1.3, 7.10.1.4 and 7.10.1.5 into TTCN-3 values as specified in Annex P.5.

[V2G4-016] The V2GTP codec shall encode TTCN-3 values as specified in Annex P.5 into corresponding V2GTP envelopes as specified in ISO 15118-2:2014, 7.8.3.1.

[V2G4-017] The V2GTP codec shall decode V2GTP envelopes as specified in ISO 15118-2:2014, 7.8.3.1 into TTCN-3 values as specified in Annex P.5.

7 Test suite conventions

7.1 General information

This clause specifies all conventions that are relevant for conformance tests of SUTs implementing ISO 15118-2.

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

7.2 Test suite structure (TSS)

An abstract test suite is a complete set of abstract test cases, possibly combined into groups or modules (e.g. for use cases or domains like AC, DC charging), that are necessary to perform conformance testing for a given SUT.

Each abstract test case specifies how the SUT is stimulated with specific inputs and furthermore specifies expected reaction(s) for verdict assignment. Depending on the test purpose different pre-conditions and post-conditions are considered for the formulation of the test behavior. The pre-conditions, post-conditions as well as test behaviors are encapsulated into individual functions and stored within separate modules. Thus, an abstract test case is composed by the actual test behavior enveloped by pre- and post-conditions (see 7.7.6 for detail). The corresponding grouping of functions can therefore be assigned to the lowest abstract hierarchical level (see Figure 2). The abstract test cases are assigned to the second level.

Figure 2 — General overview of the Test Suite Structure (TSS)

The test profile is a collection of self-contained test cases as well as PICS (see 7.3.4) and PIXIT (see 7.3.5) in order to represent a given use case. The selection is based on the use cases of the ISO 15118 series and its corresponding requirements.

Hence the abstract test suite structure (TSS) is segmented into subgroups according to the use cases specified in ISO 15118-1 for conformance testing. Table 1 shows these subgroups, which are used for the organization of the abstract test case specifications as well as for the test suite identifiers (see 7.4 for detail).

Printed copies are uncontrolled

Table 1 — Identifiers within the Test Suite Structure (TSS)

Identifiers	Values	Description
`<sut>`		System under test
	`EVCC`	Electric Vehicle Communication Controller
	`SECC`	Supply Equipment Communication Controller
`<dom>`		Domain
	`AC`	AC specific behaviors
	`DC`	DC specific behaviors
	`IN`	Inductive specific behaviors
	`CMN`	Common behaviors
`<ctx>`	`{fullname}`	Context (e.g. name of message pattern according to ISO 15118-2)

NOTE The domain for inductive charging is not relevant for this document but is introduced for future purposes.

Table 2 describes the Annexes derived for this document.

Table 2 — Test suite structure – Annexes description

Annexes	Description
Configuration Annex A	The configuration annex contains constant definitions timers, PICS and PIXIT definitions. The configuraton described in Annex A applies.
Test cases Annex B - E	The test case annexes contain the TTCN-3 test case files. The EVCC subclauses contain the abstract test cases if the SUT is an EVCC. The SECC subclauses contain the abstract test cases if the SUT is an SECC. The abstract test cases in Annex B- Annex E apply.
Functions Annex F – J	The function annexes contain methods for supporting the test execution as well as the actual pre-, post-conditions and test behaviors of the ISO 15118 conformance tests. The EVCC subclauses contain the test behavior if the SUT is an EVCC. The SECC subclauses contain the test behavior if the SUT is an SECC. The pre-condition sub clause contains functions that are used for defining the pre-conditions of a test behavior. The post-condition subclause contains functions that are used to establish the post-conditions of a test case. The library functions subclause contains utility functions used across the test suite for various purposes. The functions in Annex F - Annex J apply.
Templates Annex K - O	The templates sub clause contains the TTCN-3 template files for matching a SUT's reaction on a stimulus against its expected behavior. The templates in Annex K - Annex O apply.

Printed copies are uncontrolled

Data Structures Annex P	The data structures sub clause contains data structures that are needed additionally to the data structures of the ISO 15118 series, e.g. used for X.509 certificates. The data structures in Annex P apply.

7.3 Test profiles

7.3.1 General information

This sub clause specifies test profiles for conformance with ISO 15118-2. A test profile consists of a test configuration as well as a selection and assignment of PICS/PIXIT. Depending on the test configuration a set of test components and ports are specified. The test profile furthermore includes a test group defining the set of relevant test cases and the sequence in which they are executed in order to perform a conformance test for a given use case.

7.3.2 Test configurations

The test configuration reflects various ISO 15118 scenarios. Entities for the SUT, test system and PTCs are:

— Electric Vehicle Communication Controller (EVCC)

— Supply Equipment Communication Controller (SECC)

— [PWM Signaling (61851)]

Table 3 shows combinations of such entities defining valid test configurations for this document (CF_Part_ID).

Table 3 — ISO 15118-4 test configurations

CF_Part_ID	SUT	Test system	PTCs
CF_04_001	SECC	EVCC	PTC1=61851
CF_04_002	EVCC	SECC	PTC1=61851

7.3.3 Components and ports

In correspondence to the identified set of relevant test configurations this sub clause specifies test components which reflect the main entities needed for stimulation of the SUT with respect to ISO 15118. Ports are used to connect these components with each other and the SUT. The components are specified in the configuration module and are summarized in Table 4. Port types specify which kind of messages can be sent or received by this port. The corresponding port type definitions are summarized in Table 5.

Table 4 — Component definitions

Components	Description
`SECC_Tester` (MTC)	This component type is the main type for the tests of an SECC. A `V2G_TCP_TLS_ALM_SECC_Port` , `V2G_UDP_SDP_Port`, `HAL_61851_Port` and a `HAL_61851_Internal_Port` (see Table 5) are assigned to this component type.
`EVCC_Tester` (MTC)	This component type is the main type for the tests of an EVCC. A `V2G_TCP_TLS_ALM_EVCC_Port` , `V2G_UDP_SDP_Port`,

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

	HAL_61851_Port and a HAL_61851_Internal_Port (see Table 5) are assigned to this component type.
HAL_61851_Listener (PTC)	The HAL_61851_Listener is responsible for watching the correct IEC 61851 behavior and is used in the form of a parallel test component (PTC). This component uses the HAL_61851_Port (see Table 5) to communicate with an IEC 61851-1 SUT Adapter and the HAL_61851_Internal_Port to communicate with the MTC.

Table 5 — Port type definitions

Port Type	Description
V2G_TCP_TLS_ALM_SECC_Port	This port is used to send and receive V2G- Application Layer Messages (ALM) or supportedAppProtocol messages via TCP/TLS specified in ISO 15118-2 to/from an SECC. This port is also used to send and receive internal TCP/TLS port control messages specified in Annex P.
V2G_TCP_TLS_ALM_EVCC_Port	This port is used to send and receive V2G- Application Layer Messages (ALM) or supportedAppProtocol messages via TCP/TLS specified in ISO 15118-2 to/from an EVCC. This port is also used to send and receive internal TCP/TLS port control messages specified in Annex P.
V2G_UDP_SDP_Port	This port is used to send and receive SDP messages via UDP specified in ISO 15118-2 to/from an EVCC or SECC.
HAL_61851_Port	This port is used to send or receive messages to an IEC 61851 communication unit. The communication unit will interpret these messages and will set the corresponding signaling to the SUT (SECC/EVCC). The specification of the IEC 61851 communication unit is out of the scope of this document.
HAL_61851_Internal_Port	This port is used to synchronize the status of the IEC 61851-1 PWM signal between the MTC (SECC_Tester or EVCC_Tester) and PTC (HAL_61851_Listener_Port). It enables the MTC and PTC to send and receive HAL 61851-1 messages.

These components and ports compose relevant test configurations for this document. Whether the type EVCC_Tester or SECC_Tester is used as MTC depends on the type of the SUT. If the SUT is an EVCC, the MTC uses the type EVCC_Tester. If the SUT is an SECC, the MTC uses the type SECC_Tester. The HAL_61851_Listener combines all necessary listener functionality into one component, independent on whether the MTC represents an SECC_Tester or an EVCC_Tester. The MTC always contains a TTCN-3 test configuration and delimits the lifeline during test execution. Next to using ports for communication purposes, local timers, variables or constants can be assigned to components to store dynamic information in a given executable test case.

In addition to the MTC and PTC and their corresponding port type definitions, a test configuration also consists of respective Test System Interfaces (TSI). An abstract Test System Interface (TSI) is specified as a collection of ports. A TSI has no local timers, constants or variables. Only ports are assigned to it. In a given executable

© ISO 2024 – All rights reserved
Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

test case, test components ports can be mapped dynamically to the TSI ports to establish communication channel to the real test system interface. In the test configuration the TSI uses the type System_EVCC or System_SECC depending on the type of the SUT. If the SUT is an EVCC, the TSI uses the type System_EVCC. If the SUT is an SECC, the TSI uses the type System_SECC.

The test configuration is illustrated in Figure 3. The type of the V2G components and ports (EVCC or SECC) depends on the SUT type.

Figure 3 — ISO 15118-4 test configuration

As shown in Figure 3 the port mappings are specified statically as follows:

— The port `pt_V2G_TCP_TLS_ALM_EVCC_Port` of the TSI is always mapped to port `pt_V2G_TCP_TLS_ALM_EVCC_Port` of the MTC.

— The port pt_V2G_TCP_TLS_ALM_SECC_Port of the TSI is always mapped to port `pt_V2G_TCP_TLS_ALM_SECC_Port` of the MTC.

— The port `pt_V2G_UDP_SDP_Port` of the TSI is always mapped to port `pt_V2G_UDP_SDP_Port` of the MTC.

— The port `pt_HAL_61851_Port` of the TSI is always mapped to port `pt_HAL_61851_Port` of the MTC.

— The `port pt_HAL_61851_Listener_Port` of the TSI is always mapped to port `pt_HAL_61851_Listener_Port` of the `v_HAL_61851_Listener`. The `pt_HAL_61851_Listener_Port` is from the same type `HAL_61851_Port` as the `pt_HAL_61851_Port`.

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

— The internal port `pt_HAL_61851_Internal_Port` is not mapped to the TSI. This port is connected between the MTC and PTC.

7.3.4 Protocol Implementation Conformance Statement (PICS) Definition

To evaluate the conformance of a particular implementation, it is necessary to have a statement of the capabilities and options which have been implemented, and any features which have been omitted, so that the implementation can be tested for conformance against relevant requirements, and against those requirements only. Those capabilities and features are typically referred to as Implementation Conformance Statements, ICS. In the context of a communication protocol as specified in ISO 15118-2 such statements are referred to as Protocol Implementation Conformance Statement (PICS) cf. [ITU-T X.290].

All PICS specified in the ATS are summarized in Table 6 - Table 8. These PICS specify selection criteria in the test system for an appropriate test case selection considering a given SUT. The PICS also specify appropriate configuration settings in the test system for each test case.

Table 6 — PICS for test system configurations CF_04_001 and CF_04_002 (SUT either SECC or EVCC)

PICS	Description
`PICS_CMN_CMN_CombinedTesting`	Indication for enabling combined testing including SLAC association & V2G messaging
`PICS_CMN_CMN_ChargingMode`	Indication for testing either AC or DC charging mode
`PICS_CMN_CMN_IdentificationMode`	Indication for testing either EIM or PnC identification mode
`PICS_CMN_CMN_PlugType`	Indication for testing either type1 or type2 plug type
`PICS_CMN_AC_CableCapability`	Indication for used AC cable type Choice: i) capability13A, ii) capability20A, iii) capability32A, iv) capability63A, v) capability70A NOTE: The choices map to the following Proximity resistor values: – capability13A corresponds to resistor value equal to 1500 Ohm – capability20A corresponds to resistor value equal to 680 Ohm – capability32A corresponds to resistor value equal to 220 Ohm – capability63A corresponds to resistor value equal to 100 Ohm (1-phase) – capability70A corresponds to resistor value equal to 100 Ohm (3-phase)
`PICS_CMN_CMN_WakeUp`	Indication for the pre-defined wake-up time of the test system within a paused session (test system wakes up the SUT)

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Printed copies are uncontrolled

PICS_CMN_CMN_Renegotiation	Indication for explicit testing of Renegotiation
PICS_CMN_CMN_Renegotiation LoopIndication	Indicates the number of iterations of the ChargingStatus (AC) or CurrentDemand (DC) loop, when the renegotiation is triggered by the test system (smaller or equal to PICS_CMN_CMN_LoopCounter). NOTE: The minimum value of loop counter is 30
PICS_CMN_CMN_LoopCounter	Indicates the number of iterations of the ChargingStatus (AC) or CurrentDemand (DC) loop NOTE: The minimum value of loop counter is 30

Table 7 — PICS for test system configurations CF_04_001 (SUT equals SECC)

PICS	Description
PICS_SECC_CMN_Pause	Indication for enabling a charging pause in SessionStopReq message (ChargingSession)
PICS_SECC_CMN_EIMDone	Indication for the specified state initiating an EIM Authorization Choice: i) beforePlugin, ii) afterPlugin, iii) duringSlac, iv) v2gAuthorization
PICS_SECC_CMN_EvStateInChargeProgress	Indication for explicit testing of State C or D of IEC 61851-1:2017, Annex A during charging
PICS_SECC_DC_WeldingDetection	Indication for explicit testing of WeldingDetection
PICS_SECC_CMN_DepartureTime	Indication for using a departure time in ChargeParameterDiscoveryReq message
PICS_SECC_CMN_MaxEntriesSAScheduleTuple	Indication for enabling a maximal number of expected entries in the SAScheduleTuple (received in ChargeParameterDiscoveryRes message) by using the element MaxEntriesSAScheduleTuple in ChargeParameterDiscoveryReq message

Table 8 — PICS for test system configurations CF_04_002 (SUT equals EVCC)

PICS	Description
PICS_EVCC_CMN_PmaxScheduleWithZeroPow	Indication for enabling a PmaxScheduleList with a list element pMax = 0W in SAScheduleList in ChargeParameterDiscoveryRes message NOTE: For this approach the following assumption is considered: The EV triggers a paused session if the EVSE cannot provide

	power for a specified time period. This approach might NOT work for all EVs. In this case all relevant test cases with reference to `PICS_EVCC_CMN_PmaxSchedulewithZeroPow` are out of the scope of the test execution. Choice: i) sleepWithoutCharge (0W in first element of PmaxScheduleList), ii) sleepAfterCharge (0W in second element of PmaxScheduleList), iii) none_
`PICS_EVCC_CMN_Receipt Required`	Indication for explicit testing of MeteringReceipt message activated by the element ReceiptRequired in ChargingStatusRes (AC) or CurrentDemandRes (DC) message
`PICS_CMN_EVCC_SalesTariff`	Indication for using a SalesTariff in ChargeParameterDiscoveryRes message

7.3.5 Protocol Implementation extra Information for Testing (PIXIT) Definition

Any additional information required for testing that is not covered in the form of an ICS / PICS, is specified in the form of Implementation extra Information for Testing (IXIT). In the context of a communication protocol as specified in ISO 15118-2 such statements are referred to as Protocol Implementation extra Information for Testing (PIXIT) cf. [ITU-T X.290] and are used to indicate to the SUT that a specific capability of the SUT is tested. In order to ensure testability of each message pair specified in ISO 15118-2, the following set of PIXIT are specified.

NOTE Due to the black box test paradigm in this document, it is not specified how to ensure that a corresponding PIXIT is set on the SUT side for a given executable test case.

All PIXIT specified in the ATS are summarized in Table 9 - Table 11. These PIXITs relate to the SUT and specify what protocol options are implemented in the SUT and what confiugration is required for each testcase

Table 9 — Selected PIXIT for test system configurations CF_04_001 and CF_04_002 (SUT either SECC or EVCC)

PIXIT	Description
`PIXIT_CMN_CMN_WakeUp`	Indication for the wake-up time of the SUT within a paused session (SUT wakes up the test system)
`PIXIT_CMN_CMN_PkiName`	Indication for selected PKI Choice: i) PKI_1, ii) PKI_2, iii) PKI_3, iv) PKI_4, v) PKI_5, vi) PKI_6, vii) PKI_7
`PIXIT_CMN_CMN_Renegotiation`	Indication for explicit testing of Renegotiation initiated by the SUT Choice: i) renegotiation, ii) unknown
`PIXIT_CMN_CMN_MeterReading`	Indication for explicit testing of MeterReading element Choice: i) meterReading, ii) unknown

Table 10 — Selected PIXIT for test system configurations CF_04_001 (SUT equals SECC)

PIXIT	Description
PIXIT_SECC_CMN_VAS	Indication for explicit testing of ServiceDetail message (SUT is supposed to send a serviceList within ServiceDiscoveryRes message) Choice: i) serviceDetail, ii) none_
PIXIT_SECC_CMN_ReceiptRequired	Indication for explicit testing of MeteringReceipt message
PIXIT_SECC_CMN_CertificateHandling	Indication for explicit testing of CertificateInstallation or CertificateUpdate message Choice: i) certInstall, ii) certUpdate, iii) none_
PIXIT_SECC_CMN_SalesTariff	Indication for explicit testing of Sales Tariff elements in ChargeParameterDiscoveryRes message Choice: i) salesTariff, ii) unknown
PIXIT_SECC_CMN_TLS	Indication for explicit testing of TLS in EIM mode
PIXIT_SECC_CMN_VersionNumberMinor	Indication for the supported VersionNumberMinor in SupportedAppProtocolRes message
PIXIT_SECC_CMN_InternetAccess	Indication for support of InternetAccess service in ServiceDiscoveryRes message Choice: i) internetAccess, ii) unknown
PIXIT_SECC_DC_CableCheckOngoing	Indication for explicit testing of the repetition of the CableCheck message sequence Choice: i) ongoing, ii) unknown
PIXIT_SECC_CMN_AuthorizationOngoing	Indication for explicit testing of the repetition of the Authorization message sequence (SUT is not authorized in case of EIM) Choice: i) ongoing, ii) unknown
PIXIT_SECC_CMN_ChargeParameterDiscoveryOngoing	Indication for explicit testing of the repetition of the ChargeParameterDiscovery message sequence Choice: i) ongoing, ii) unknown
PIXIT_SECC_CMN_MeterInfo	Indication for explicit testing of MeterInfo element in ChargingStatusRes (AC) or CurrentDemandRes (DC) message Choice: i) meterInfo, ii) unknown
PIXIT_SECC_CMN_PaymentOption	Indication for supported payment option within ServiceDiscoveryRes message (Only one payment option possible) Choice: i) externalPayment, ii) contract

Table 11 — Selected PIXIT for test system configurations CF_04_002 (SUT equals EVCC)

PIXIT	Description
PIXIT_EVCC_CMN_VAS	Indication for explicit testing of ServiceDetail message (SUT sends a ServiceDetailReq message for each service of the received serviceList) Choice: i) serviceDetail, ii) none_, iii) unknown
PIXIT_EVCC_CMN_Pause	Indication for enabling a charging pause in SessionStopReq message (ChargingSession) Choice: i) pause, ii) unknown, iii) none_
PIXIT_EVCC_DC_WeldingDetection	Indication for explicit testing of WeldingDetection message Choice: i) weldingDetection, ii) none_, iii) unknown
PIXIT_EVCC_CMN_TLS	Indication for explicit testing of TLS in EIM mode Choice: i) tls, ii) none_, iii) unknown
PIXIT_EVCC_CMN_CertificateHandling	Indication for explicit testing of CertificateInstallation or CertificateUpdate message Choice: i) certInstall, ii) certUpdate, iii) none_, iv) unknown NOTE: For an automated test execution of multiple certificate installation or certification update processes, a customer interaction in the SUT (e.g. Deletion of installed contract certificates) might be necessary.
PIXIT_EVCC_CMN_DepartureTime	Indication for explicit testing of DepartureTime element in ChargeParameterDiscoveryReq message Choice: i) departureTime, ii) none_, iii) unknown
PIXIT_EVCC_AC_MaxNumberOfPhasesInUse	Indication for explicit testing of MaxNumberOfPhasesInUse element in ChargeParameterDiscoveryReq message Choice: i) maxNumberOfPhasesInUse, ii) unknown
PIXIT_EVCC_CMN_ChargingProfileOptimization	Indication for the SUTs capability to optimize charging profiles based on the received SAScheduleList Choice: i) optimization, ii) none_, iii) unknown
PIXIT_EVCC_CMN_OldSAScheduleTupleID	Indication for explicit testing of using the previous SAScheduleTupleID after renegotiation in PowerDeliveryReq message Choice: i) oldSAScheduleTupleID, ii) unknown

PIXIT_EVCC_CMN_SAScheduleTupleIDMR	Indication for explicit testing SAScheduleTupleID within MeteringReceiptReq message Choice: i) sAScheduleTupleID, ii) unknown

7.4 Test suite identifiers

7.4.1 General information

The selection of common naming conventions is one simple and often used mechanism to implement test suites which are consistent, maintainable and understandable for multiple users. Therefore, based on common ETSI naming conventions more specific naming conventions for the ISO 15118 conformance test suite are specified.

7.4.2 Module identifiers

All modules specified in the TSS start with a capital letter. The ISO 15118 test suite specific module identifier for template, function or test case modules is specified as:

```
<modtype>_<sut>_<ctx>
```

The segments of this identifier are specified in Table 12. An example for test case module identifier is:

```
TestCases_SECC_SupportedAppProtocol
```

Table 12 — ISO 15118 test suite naming convention for modules

Identifier	Values	Description
<modtype>		Module type
	TestCases	Module including test cases
	Functions	Module including functions
	Templates	Module including templates
<sut>		System under test
	EVCC	Electric Vehicle Communication Controller
	SECC	Supply Equipment Communication Controller
	CMN	Common (exclusively for template modules)
<ctx>	{fullname}	Context (e.g. name of message pattern according to ISO 15118-2)

NOTE 1 to entry For module types other than templates, functions or test cases there is no identifier format specified.

7.4.3 Test case identifiers

The naming conventions for test cases are using a prefix, which is specified by ETSI as shown in Table 13.

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Table 13 — ETSI naming convention for test case names

Keyword	Definition	Example
testcase name	Every testcase begins with TC (`TC_`) `TC_TestCaseName`	`TC_SupportedAppProtocol`

The ISO 15118 test suite specific test case identifier is specified as:

`TC_<sut>_<dom>_<ttyp>_<ctx>_<nn>`

The segments of this identifier are described in Table 14. An example for test case identifier is:

`TC_SECC_AC_VTB_SupportedAppProtocol_001`

Table 14 — ISO 15118 test suite naming convention for test case identifiers

Identifier	Values	Description
`<prefix>`	`TC`	see Table 13
`<sut>`		System under test
	`EVCC`	Electric Vehicle Communication Controller
	`SECC`	Supply Equipment Communication Controller
`<dom>`		Domain
	`AC`	AC specific behaviors
	`DC`	DC specific behaviors
	`CMN`	Common
`<ttyp>`		Type of testing
	`VTB`	Valid test behavior
`<ctx>`	`{fullname}`	Context (e.g. name of message pattern according to ISO 15118-2)
`<nn>`	`{xxx}`	Sequential number from 001 to 999

7.4.4 Template identifiers

The naming conventions for templates are using a prefix, which is specified by ETSI as shown in Table 15.

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

Table 15 — ETSI naming convention for templates

Keyword	Context	Definition	Example
template name	Templates with concrete attribute values	Every template begins with keyword m (`m_`)	`m_DNSRequest`
template name	Templates with wildcards or matching expression	If a template contains or refers to templates with wildcards {*|?} then template name begins with keyword mw (`mw_`)	`mw_DNSResponse`
template name	Templates with parameters, which do not assign or refer to templates with wildcards or matching expression	If a template contains attributes which are specified by parameters or constant values, then template name begins with keyword md (`md_`)	`md_DNSResponse` (integer ip)
template name	Templates with parameters, which do assign or refer to templates with wildcards or matching expression	If a template contains attributes which are specified by parameters, constant values or wildcards, then template name begins with keyword mdw (`mdw_`)	`mdw_DNSResponse` (integer ip)

The ISO 15118 test suite specific template identifier is specified as:

`<prefix>_<sut>_<dom>_<dtyp>_<nn>`

The segments of this identifier are described in Table 16. An example for template identifier is:

`mdw_EVCC_CMN_SupportedAppProtocol_001`

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Table 16 — ISO 15118 test suite naming convention for template identifiers

Identifier	Values	Description
`<prefix>`		Type of template (see Table 15)
`<sut>`		System under test
	`EVCC`	Electric Vehicle Communication Controller
	`SECC`	Supply Equipment Communication Controller
	`CMN`	Common
`<dom>`		Domain
	`AC`	AC specific behaviors
	`DC`	DC specific behaviors
	`CMN`	Common
`<dtyp>`	`{fullname}`	Label of (root) data type according to ISO 15118-2
`<nn>`	`{xxx}`	Sequential number from 001 to 999

7.4.5 Function identifiers

The naming conventions for functions are using a prefix, which is specified by ETSI as shown in Table 17.

Table 17 — ETSI naming convention for function names

Keyword	Context	Definition	Example
function name	All functions	Every function begins with f (`f_`)	`f_functionName`

The ISO 15118 test suite naming convention for test case functions is specified as:

`<prefix>_<sut>_<dom>_<ftyp>_<ttyp>_<ctx>_<nn>`

The segments of this identifier are described in Table 18. An example for template identifier is:

`f_EVCC_AC_TB_VTB_SessionSetup_001`

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

Table 18 — ISO 15118 test suite naming convention for function names

Identifier	Values	Description
`<prefix>`		f_ (see Table 17)
`<sut>`		System under test
	`EVCC`	Electric vehicle communication controller
	`SECC`	Supply equipment communication controller
`<dom>`		Domain
	`AC`	AC specific behaviors
	`DC`	DC specific behaviors
	`CMN`	Common
`<ftyp>`		Function type
	`PR`	Pre-condition
	`TB`	Test behavior
	`PO`	Post-condition
`<ttyp>`		Type of testing
	`VTB`	Valid test behavior
`<ctx>`	`{fullname}`	Context (e.g. name of message pattern according to ISO 15118-2)
`<nn>`	`{xxx}`	Sequential number from 001 to 999

7.4.6 Timer identifiers

The naming conventions for timers are using a prefix, which is specified by ETSI as shown in Table 19.

Table 19 — ETSI naming convention for timers

Keyword	Context	Definition	Example
timer name	`t_`	Local timer	`t_wait`
timer name	`tc_`	Timer specified within a component	`tc_authMin`

The ISO 15118 test suite specific timer identifier is specified as:

`<prefix>_<ctx>`

The segments of this identifier are described in Table 20. An example for timer identifier is:

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

`tc_V2G_EVCC_Msg_Timer`

Table 20 — ISO 15118 test suite naming convention for timer identifiers

Identifier	Values	Description
`<prefix>`		Type of timer (see Table 19)
`<ctx>`	`{fullname}`	Context (for example, name of timer according to ISO 15118-2 or if not specified any given name describing the context of the timer, e.g. `EVCC_SDP_Timer`)

7.4.7 PICS/PIXIT identifiers

The ISO 15118 test suite naming convention for PICS/PIXIT is specified as:

`<pic>_<sut>_<dom>_<ctx>`

The segments of this identifier are described in Table 21. An example for PICS/PIXIT identifier is:

`PICS_CMN_CMN_IdentificationMode`

Table 21 — ISO 15118 test suite naming convention for PICS/PIXIT identifiers

Identifier	Values	Description
`<pic>`		Protocol implementation capability
	`PICS`	Protocol implementation conformance statement
	`PIXIT`	Protocol implementation extra information for testing
`<sut>`		System under test
	`EVCC`	Electric vehicle communication controller
	`SECC`	Supply equipment communication controller
	`CMN`	Common
`<dom>`		Domain
	`AC`	AC specific behaviors
	`DC`	DC specific behaviors
	`CMN`	Common
`<ctx>`	`{fullname}`	Context (e.g. name of message pattern according to ISO 15118-2)

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Printed copies are uncontrolled

7.4.8 Verdict identifiers

In this sub clause the conventions for test verdicts are specified. The test verdicts specified in this document are listed in Table 22.

Table 22 — ISO 15118 test suite conventions on verdict handling

Verdict type	TTCN-3 Definition	ISO 15118 test suite
none	Is implicitly assigned in the beginning of every test case by default and is reported as a final verdict in the absence of any other verdict assignment during the test case execution.	No TSS specific definition (see TTCN-3 definition).
pass	Means that everything is OK. A verdict given when the observed outcome satisfies the test purpose and is valid with respect to the relevant requirements and with respect to the PICS. [ITU-T X.290]	If in review of a requirement the SUT has a correct behavior, then this verdict type is used.
inconc	A verdict given when the observed outcome is valid with respect to the relevant requirements but prevents the test purpose from being accomplished. [ITU-T X.290]	Means that neither pass nor fail can be reliably assigned.
fail	A verdict given when the observed outcome is syntactically invalid or inopportune with respect to the relevant requirements or the PICS/PIXIT. [ITU-T X.290]	If in review of a requirement the SUT has a wrong behavior, then this verdict type is used.

7.5 Test suite coverage

The following conditions apply in terms of test case coverage for this document regarding requirements specified in ISO 15118-2.

— Requirements that are out of the scope of the ATS according to the conventions specified in this document or cannot be tested in black-box tests are summarized in Table 23.

— Requirements that are not explicitly tested through a dedicated test case in the ATS but implicitly tested by the SUT Adapter/Codec are summarized in Table 24.

Table 23 — Requirements of ISO 15118-2 not considered in the ATS

List of requirement IDs	Comment (no consideration in ATS)
[V2G2-133], [V2G2-162], [V2G2-439], [V2G2-449], [V2G2-663], [V2G2-678], [V2G2-698], [V2G2-703], [V2G2-707], [V2G2-709], [V2G2-719], [V2G2-720], [V2G2-734], [V2G2-735],	Cannot be tested explicitly in EVCC black box test configuration

[V2G2-035], [V2G2-036]	Out of scope of this standard (Requirements refers to ISO 15118-5)

Table 24 — Requirements of ISO 15118-2 implicitly covered by the SUT adapters / codecs

List of requirement IDs	Comment (implicitly tested)
[V2G2-010]	Cannot be tested explicitly in SECC/EVCC black box test configuration for the profile defined in the respective column. Tested implictly by V2G codec for the profile defined in the respective column
[V2G2-073], [V2G2-075], [V2G2-077], [V2G2-078], [V2G2-079], [V2G2-080], [V2G2-081], [V2G2-083], [V2G2-084], [V2G2-085], [V2G2-124], [V2G2-125], [V2G2-128], [V2G2-129], [V2G2-131], [V2G2-132], [V2G2-136], [V2G2-137], [V2G2-138], [V2G2-139], [V2G2-143], [V2G2-149], [V2G2-151], [V2G2-155], [V2G2-156], [V2G2-174], [V2G2-622], [V2G2-809], [V2G2-816]	Tested implictly by 15118-2 SUT adapter
[V2G2-097], [V2G2-098], [V2G2-099], [V2G2-100], [V2G2-101], [V2G2-102], [V2G2-171], [V2G2-440], [V2G2-445], [V2G2-600], [V2G2-697], [V2G2-825]	Tested implictly by V2G codec
[V2G2-651]	Tested implictly by V2G codec. Requirement is only testable if a corresponding PIXIT is considered for the profile defined in the respective column.

The resulting test suite coverage in this document with reference to requirements in ISO 15118-2 is summarized in Table 25. It only includes requirements which are not listed for exclusion in Table 23 or Table 24. Table 25 specifies the relevance of requirements of ISO 15118-2 for the ATS, based upon the type of SUT (EVCC or SECC), the authentication profile (EIM or PnC) and AC or DC charging. The following symbols are used in Table 25:

X Indicates requirements that are covered in the ATS with one or more test cases.

I Indicates requirements that are indirectly covered in the ATS but other than those listed in Table 24 can be directly associated to one or more test cases in the ATS.

P Indicates requirements that are only partially covered by one or more test cases in the ATS.

N Requirements that are not testable for the profile in the respective column.

- Requirements that are not applicable for the profile in the respective column.

O Requirements that are out of the scope of the ATS for the profile in the respective column.

Several requirements in ISO 15118-2 are covered in multiple test cases of the ATS. For a simplified representation, the relevant TC identifier of each test case is mapped to the corresponding requirement. These special groups are summarized in Table 26. If two requirement groups refer to an identical set of TC identifiers, these groups are consolidated.

Table 26 — Groups for a simplified TC Id representation (see Table 25)

Group name	TC IDs
Group_[V2G2-159]	TC_EVCC_AC_VTB_SDP_001, TC_EVCC_AC_VTB_SDP_002, TC_EVCC_AC_VTB_SDP_003, TC_EVCC_AC_VTB_SDP_005, TC_EVCC_AC_VTB_SDP_006, TC_EVCC_AC_VTB_SDP_007, TC_EVCC_AC_VTB_SDP_009, TC_EVCC_AC_VTB_SDP_010,

7.6 Test case description

The test case descriptions in this document are described according to the template shown in Table 27.

Table 27 — Test case description template

TC Id	The TC Id is a unique identifier for a test case. It is specified according to the TC Id naming convention specified in 7.4.3.
Test objective	Short description of test objective according to the requirements from ISO 15118-2.
Document reference	The document reference indicates the sub-clauses in the referenced standard where the static or dynamic conformance requirement(s) is/are specified. The references are provided according to the following format: Document: ISO15118-X:20XX(IS|FDIS) Section(s): x.x.x.x.x, y.y.y.y.y, …
Referenced requirement(s)	List of referenced requirement(s) for this test case. The requirements are referenced according to the format specified in the referenced standard, for example: [V2GX-XXX]
Config Id	The Config Id references the test configuration specified in this document according to 7.3.2 which is selected for this test case. For example: CF_04_001
PICS selection	The PICS selection references the PICS statement(s) for this test case in accordance with 7.3.4. if the corresponding test behavior requires a specific assignment. Example: `PICS_CMN_CMN_IdentificationMode := eIM`
PIXIT selection	The PIXIT selection references the PIXIT statement(s) for this test case in accordance with 7.4.7. if the corresponding test behavior requires a specific assignment on SUT side. Example: `PIXIT_EVCC_CMN_VAS := serviceDetail`
Pre-condition	
The pre-condition specifies in which state the SUT is before executing the actual test case. In the corresponding test case, when the execution of the initial condition does not succeed, it leads to the assignment of an “Inconclusive” verdict. The pre-condition is specified as reference to the pre-condition function in the ATS. Example: `f_SECC_CMN_PR_ServiceDetail_001`

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

Expected behavior
Definition of the events, which are part of the test case objective, the SUT is expected to perform in order to conform to the base specification. The expected behavior is specified as reference to the testbehavior function in the ATS. Example: `f_SECC_CMN_TB_VTB_ServiceDetail_001`

7.7 Test case specification

7.7.1 General information

The abstract test case specifications are provided in the form of a TTCN-3 test suite according to the TTCN-3 Core Language as specified in ETSI ES 201 873-1 V4.6.1. This sub clause specifies additional conventions for the scope of this test suite

7.7.2 Data types

7.7.2.1 V2G PICS

The TTCN-3 data structures for PICS (enumerations) according to 7.3.4 are specified in Annex P.2.

7.7.2.2 V2G TCP Port Control

The TTCN-3 data structures for V2G TCP Port Control according to [V2G4-007] are specified in Annex P.4.

7.7.2.3 V2GTP

The TTCN-3 data structures for testing V2GTP conformance are specified in Annex P.5. The TTCN-3 data representation for V2GTP message header handling is specified according to ISO 15118-2:2014, 7.8.

7.7.2.4 SDP

The TTCN-3 data structures for testing SDP conformance are specified in Annex P.5. The TTCN-3 data representation for SDP requests and responses is specified according to ISO 15118-2:2014, 7.10.1.

7.7.2.5 V2G messages

The TTCN-3 data representation of all V2G messages specified in ISO 15118-2:2014, Clause 8 is handled according to ETSI ES 201 873-9 V4.6.1 (TTCN-3: Using XML schema with TTCN-3). It specifies an unambiguous mapping between XML Schema based type definitions and a corresponding TTCN-3 data type representation. The resulting TTCN-3 data structures for testing V2G messaging conformance are specified in Annex P.7.

7.7.2.6 X.509 Certificates

The TTCN-3 data representation of X.509 certificates is specified in addition to ISO 15118-2:2014, Clause 8 in XML schema and is handled according to ETSI ES 201 873-9 V4.6.1 (TTCN-3: Using XML schema with TTCN-3). It specifies an unambiguous mapping between XML Schema based type definitions and a corresponding TTCN-3 data type representation. The resulting TTCN-3 data structures for testing V2G messaging conformance including X.509 Certificates are specified in Annex P.7.

Printed copies are uncontrolled

7.7.3 Templates

A template specifies at least one value for a data type. The templates in this document are used for two purposes:

— Representation of stimulus test data

— SUT response matching with expected behavior

The templates relevant for this document are specified in Annex K - Annex O. Templates that are only used once in a concrete test case are specified in their corresponding context in the Annexes. All templates that are used in several test cases / contexts are specified in the common sections in the Annexes.

The templates for the V2G messages specified in the XML schema of ISO 15118-2 consist of a header (`MessageHeaderType`) and a body (`BodyElement_group`). There are templates that can be parameterized. At least one template for each message exists, where all elements of the first level of the message type are specified as parameters of the template.

In the TSS the following rules apply for templates used in the context of test cases for EVCC / SECC:

— For testing an SECC every attribute in an EVCC request message is either allocated or omitted.

— For testing an EVCC every attribute in an SECC response message is allocated either by parameters of the template or TTCN-3 wildcards.

7.7.4 Timeouts and timers

All timeouts are specified according to ISO 15118-2. For the scope of this document *performance times* in ISO 15118-2 are irrelevant since they are not visible to the test system (black box testing). Hence only *timeouts* can be exactly measured from the test system''s perspective and are considered in this document. The resulting timeout definitions for the TTCN-3 test suite are provided in Annex A.2.

The timer handling in the test suite is specified as follows: Before sending a stimulus to the SUT the corresponding message timer is started. After receiving the expected response from the SUT the message timer will be stopped. In case no response is received from the SUT until the point in time specified by the corresponding timeout value, the test verdict is set t‘ 'fal’e'. The timer handling is modelled as part of the test behavior section within the abstract test case specification.

7.7.5 Common behavior

Within the TSS few functions are specified which are used in different contexts thus being invoked from various callers. Such functions are specified in Annex F.5.

7.7.6 Test case modelling

One test case always executes a specific test behavior and verifies the SUT behavior according to its message-based response. All test cases always begin and end in a specified and recoverable state of the SUT and the test system. As a consequence, every test case consists of the following phases:

a) Initialize

   1) Create PTC components

   2) Map all MTC/PTC/system ports and communication bindings according to the underlying test configuration

b) Pre-condition

© ISO 2024 – All rights reserved

Firmenname: Hochschule für Technik, Wirtschaft und Kultur Benutzername: _ip_user_c8563dc5-739d-4631-bf84-0b2da5471fdb

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47
Printed copies are uncontrolled

The test system is supposed to start in a state so that a communication or data exchange with the SUT is possible. In the pre-condition of a test case the test system as well as the SUT therefore initialize into known and stable state. This incorporates the following action:

1) Bring SUT and test system to a valid and known state before the actual test behavior is executed

c) Test behavior

The actual test behavior specifies the set of steps during the test execution which are essential in order to achieve the test purpose and assign verdicts to the possible outcomes. This involves the following actions:

1) Initialize and start relevant timer(s) on the test system side

2) Execute test behavior (send stimulus to the SUT)

3) Listen to any events and verify SUT response (stop timers)

4) Assign test verdict for this test behavior

d) Post-condition

1) Bring SUT and test system into final/initial state

e) Shutdown

1) Unmap all connected ports & communication bindings

2) Shutdown PTC components

7.7.7 Message handling depending on SUT type

In reference to the test case modelling as specified in the previous sub clause, a stimulus is always sent from the test system to the SUT as part of the test behavior (phase c2). Due to the strictly specified client, server roles assigned to the EVCC and SECC respectively, the following two message handling paradigms result depending on the type of the SUT:

[V2G4-067] If the SUT is an SECC, the test system shall send a request message as stimulus to the SUT during phase c2 (see 7.7.6) and expects the corresponding V2G response message back from the SUT for verdict assignment.

[V2G4-068] If the SUT is an EVCC, the test system shall send a response message as stimulus to the SUT during phase c2 (see 7.7.6) and expects a V2G request message according to the next message pattern in the V2G message sequence back from the SUT for verdict assignment. If multiple next messages are specified, the test system shall be able to handle these for verdict assignment.

7.7.8 Configuration of electrical parameters and power flow related data

7.7.8.1 General information

Some test cases in this document depend on electrical parameterization of AC or DC power flow related data. The parameterization recommendations provided in sub clauses 7.7.8.2 and 7.7.8.3 ensure that general test conditions are satisfied by applying values that are in the supported range of the test system as well as the SUT.

7.7.8.2 Electrical parameters for DC power flow configuration

With reference to Annex A.2, an overview of all relevant DC power flow test system parameters and their recommended settings are provided in Table 28, where the following definitions apply:

- Test System MaxDCxxxRating – Maximum nominal DC rating of the Test System for current, voltage and power
- Test System MinDCxxxRating – Minimum nominal DC rating of the Test System for current and voltage.
- SUT MaxDCxxxRating – Maximum nominal DC rating of the SUT for current, voltage and power
- SUT MinDCxxxRating – Minimum nominal DC rating of the SUT for current and voltage

Table 28 – DC power flow test system configuration parameters

Parameter	Description & recommended setting
`par_EVMaximumCurrentLimit (DC)`	Maximum DC current limit the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Min(Test System MaxDCCurrentRating, SUT MaxDCCurrentRating), where Test System MaxDCCurrentRating > SUT MinDCCurrentRating
`par_EVMaximumVoltageLimit (DC)`	Maximum DC voltage limit the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Min(Test System MaxDCVoltageRating, SUT MaxDCVoltageRating), where Test System MaxDCVoltageRating > SUT MinDCVoltageRating
`par_EVMaximumPowerLimit (DC)`	Maximum DC power limit the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Min(Test System MaxDCPowerRating, SUT MaxPowerRating)
`par_EVMinimumCurrentLimit (DC)`	Minimum DC current limit the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Max(Test System MinDCCurrentRating, SUT MinDCCurrentRating), where Test System MinDCCurrentRating < SUT MaxDCCurrentRating
`par_EVMinimumVoltageLimit (DC)`	Minimum DC voltage limit the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Max(Test System MinDCVoltageRating, SUT MinDCVoltageRating), where Test System MinDCVoltageRating < SUT MaxDCVoltageRating
`par_EVSEMaximumCurrentLimit (DC)`	Maximum DC current limit the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting:

	Min(Test System MaxDCCurrentRating, SUT MaxDCCurrentRating), where Test System MaxDCCurrentRating > SUT MinDCCurrentRating
`par_EVSEMaximumVoltageLimit (DC)`	Maximum DC voltage limit the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: Min(Test System MaxDCVoltageRating, SUT MaxDCVoltageRating), where Test System MaxDCVoltageRating > SUT MinDCVoltageRating
`par_EVSEMaximumPowerLimit (DC)`	Maximum DC power limit the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: Min(Test System MaxDCPowerRating, SUT MaxPowerRating)
`par_EVSEMinimumCurrentLimit (DC)`	Minimum DC current limit the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: Max(Test System MinDCCurrentRating, SUT MinDCCurrentRating) , where Test System MinDCCurrentRating < SUT MaxDCCurrentRating
`par_EVSEMinimumVoltageLimit (DC)`	Minimum DC voltage limit the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: Max(Test System MinDCVoltageRating, SUT MinDCVoltageRating), where Test System MinDCVoltageRating < SUT MaxDCVoltageRating

NOTE 1 The parameterization recommendation is provided to ensure valid DC power flow related configuration for the purpose of charging communication protocol conformance test cases specified in this document. For validation of electrical requirements of the DC charging process, please refer to IEC 61851-1 and IEC 61851-23.

7.7.8.3 Electrical parameters for AC power flow configuration

With reference to Annex A.2, an overview of all relevant AC power flow test system parameters an their recommended settings are provided in Table 29, where the following definitions apply:

- Test System MaxACxxxRating – Maximum nominal AC rating of the Test System for current and voltage
- Test System MinACxxxRating – Minimum nominal AC current rating of the Test System
- SUT MaxACxxxRating – Maximum nominal AC rating of the SUT for current and voltage
- SUT MinACxxxRating – Minimum nominal AC rating of the SUT for current and voltage

Table 29 – AC power flow test system configuration parameters

Parameter	Description & recommended setting
par_EVMaxCurrent (AC)	Maximum AC current the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting:

Printed copies are uncontrolled

	Min(Test System MaxACCurrentRating, SUT MaxACCurrentRating), where Test System MaxACCurrentRating > SUT MinACCurrentRating
par_EVMinCurrent (AC)	Minimum AC current the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Max(Test System MinACCurrentRating, SUT MinACCurrentRating), where Test System MinACCurrentRating < SUT MaxACCurrentRating
par_EVMaxVoltage (AC)	Maximum AC voltage the test system applies in test configuration CF_04_001 (SUT SECC) Recommended setting: Min(Test System MaxACVoltageRating, SUT MaxACVoltageRating), where Test System MaxACVoltageRating > SUT MinACVoltageRating
par_EVSEMaxCurrent (AC)	Maximum AC current the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: Min(Test System MaxACCurrentRating, SUT MaxACCurrentRating) where Test System MaxACCurrentRating > SUT MinACCurrentRating
par_EVSENominalVoltage (AC)	Nominal AC voltage the test system applies in test configuration CF_04_002 (SUT EVCC) Recommended setting: < SUT MaxACVoltageRating

NOTE 1 The parameterization recommendation is provided to ensure valid AC power flow related configuration for the purpose of test cases on communication protocol conformance specified in this document. For validation of electrical requirements of the AC charging process, please refer to IEC 61851-1.

7.7.9 Public key infrastructure (PKI) setup and certificate handling

The ISO 15118-2 requires the existence of multiple certificates to be applied for both the transport layer security (TLS) and for XML-security on application layer. SECC certificates are used to unilaterally authenticate SECC's by EVCC'S and contract certificates are handled at the application layer to authenticate an EVCC against an SECC and/or secondary actor. V2G root certificates and possibly Sub-CA certificates are used to certify SECC certificates and EVCC contract certificates. In addition, OEM root certificates and OEM provisioning certificates can be used for installing and updating contract certificates.

Figure 4 provides a schematic of the public key infrastructure (PKI) setup used for testing of ISO 15118-2. To verify the SUT behavior not only with valid credentials, more than one PKI is required which is indicated in Figure 4 by *#V2G-CAs, #MO-CAs, #OEM-CAs and #PE-CAs*. Figure 4 also provides the number of Sub-CAs and certificates (#CPO-Sub-CA, #Prov-Sub-CA, #MO-Sub-CA, #OEM-Sub-CA etc.) for every certificate chain. Not all permutations of these parameter are valid in terms of ISO 15118-2 requirements and are even not necessary at all. For reproducibility, Table 33 to Table 35 specify the minimal PKI configuration required for ISO 15118-2 testing. Since PKI-Tooling and the PKI-Timing depending on the overall test architecture, a specific setup or even a specific certificate set are not part of standardization.

These credentials are handled as PICS/PIXIT. Each certificate also implies the existence of the associated private and public key as well as a certificate chain if required. Table 30, Table 31 and Table 32 specify the test suite naming convention in this document for the PKI and certificate identifiers. Furthermore, some test case will also modify these PICS/PIXIT in order to verify the SUT behavior using *manipulated credentials*. The PICS/

	V2G	If the certificate is issued for a V2G PKI service
	CPO	If the certificate is issued for a charge point operator
	PROV	If the certificate is issued for a provisioning service
	MO	If the certificate is issued for a mobility aperator
	OEM	If the certificate is issued for an OEM
	PE	If the certificate is issued for a private environment
	EVSE	If the certificate is issued for a EVSE by a CPO
	CONTRACT	If the certificate is issued for a contract by MO
<cert_hierarchy>		Hierarchy level of the certificate
	ROOT	If the certificate is a root CA (CA == true)
	SUB1	If the certificate is a CA (CA == true) and (PathLength == 1)
	SUB2	If the certificate is a CA (CA == true) and (PathLength == 0)
	LEAF	If the certificate is a LEAF (CA == false)
<cert_type>		Type of the certificate
	VALID	If the certificate is valid and the time of expire will not influent the test process
	EXPIRED	If the certificate is expired before test case execution
	EXPIRES	If the certificate expires soon. The time limit is configured so that it will trigger the certificate update procedure.
	INVALID_CONTENT	If any critical content (see ISO 15118-2:2014 Annex F) is invalid
	INVALID_EMAID	If the emaid has an invalid syntax
	WRONG_EMAID	If the emaid differs from the original version when the contract was concluded (Syntax is correct)
	EXPIRED_ISSUER_SUB1	If the leaf certificate was derived from expired SUB 1 certificate
	EXPIRED_ISSUER_SUB2	If the leaf certificate was derived from expired SUB 2 certificate

[V2G4-042] The Test-PKI shall consider all ISO 15118-2 requirements which are summarized in Table 36, to setup the valid certificates and corresponding certificate chains.

Table 36 — ISO 15118-2 requirements for valid PKI setup

ISO 15118-2 PKI Requirement	[V2G2-004], [V2G2-009], [V2G2-010], [V2G2-011], [V2G2-012], [V2G2-878], [V2G2-878], [V2G2-867], [V2G2-869], [V2G2-911], [V2G2-868], [V2G2-932], [V2G2-933]

[V2G4-043] At least one PKI shall have a path length >=4 constraint of the PKI certificate tree.

[V2G4-044] At least one PKI shall have a 10 number of concurrently valid V2G Root Certificates for one Root CA. The certificate shall have the suffix *_VALID_1 to *_VALID_10.

7.7.10 Transport layer security (TLS)

The security concept of ISO 15118-2:2014, 7.3 provides a basic transport-based protection mechanism based on transport layer security (TLS). Hence, the *TLS communication setup handling* using certificates (see 7.7.8) is considered by the ATS. Since the verification of the TLS implementation itself as well as associated cipher suites are out of the scope of this document, the test cases focus only the *TLS communication setup.*

In order to test the setup of a protected TCP/IP based communication using a unilaterally authenticated TLS channel between EVCC and SECC, an EVCC_Tester or SECC_Teser needs a set of certificates, keys and certificate chains. These credentials are handled as PICS/PIXIT and are summarized based on PKI-1 in Table 37 and Table 38. Furthermore, some test case will also modify these PICS/PIXIT in order to verify the SUT behavior using *manipulated credentials*. The PICS/PIXITs are a prerequisite before test case execution can be performed. The process to provide these Information to the SUT is out of the scope of this document.

Table 37 — Security Credentials EVCC_Tester TLS Communication Setup based on PKI-1

Certificates	Keys	Certificate Chain
PKI-1_CRT_EVSE_LEAF_VALID, *_ EXPIRED	PKI-1_CRT_ EVSE_LEAF_*_ Private_Key	PKI-1_CRT_CPO_SUB1_VALID -> PKI-1_CRT_CPO_SUB2_VALID
PKI-1_CRT_EVSE_LEAF_VALID	PKI-1_CRT_ EVSE_LEAF_VALID_ Private_Key	PKI-1_CRT_CPO_SUB2_VALID -> PKI-1_CRT_CPO_SUB1_VALID (Invalid chain order)

Table 38 — Security Credentials SECC_Tester TLS Communication Setup based on PKI-1

Certificates	Keys	Certificate Chain
PKI-1_CRT_ V2G_ROOT_VALID	PKI-1_CRT_ EVSE_LEAF_VALID_ Public_Key	PKI-1_CRT_CPO_SUB1_VALID -> PKI-1_CRT_CPO_SUB2_VALID
PKI-1_CRT_ V2G_ROOT_VALID	PKI-1_CRT_ EVSE_LEAF_VALID_ Public_Key	PKI-1_CRT_CPO_SUB2_VALID -> PKI-1_CRT_CPO_SUB1_VALID (Invalid chain order)

Beside the PICSs/PIXITs additional information e.g. used cipher suite or handshake results are required, to handle the *TLS Communication Setup*. These data are structured in Annex P.4. The described data structures are used to setup and control the TLS communication session.

The setup information will be used by the port map operation to configure the TLS connection.

The control information will be sent to the TLS port using the *sent to* directive with destination is set to *local.* This enables to set port control information or get TLS handshake information.

7.7.11 XML security

7.7.11.1 General information

Specific message content is signed on application layer (XML-messages), if data is supposed to be protected on the way from or to a secondary actor, or if the integrity protection has to last longer than the existence of the TLS channel. To test these integrity protection means on application layer, additional external functions are required.

7.7.11.2 Signing and Verification requirements for XML security

[V2G4-045] The external function for XML security shall provide a mean to calculate the message digest using a given digest algorithm and data stream.

[V2G4-046] The external function for XML security shall provide a mean to encode XML data as EXI representation of this stream.

[V2G4-047] The external function for XML security shall provide a mean to sign a data stream based on a signature algorithm.

[V2G4-048] The external function for XML security shall provide a mean to verify a signed data stream. This function shall use a given signature algorithm, a signature, a leaf certificate and the EXI encoded data that should be signed. It shall return whether verification was successful or otherwise.

Datum / Uhrzeit des Ausdrucks: 2025-12-02, 12:53:47

Printed copies are uncontrolled

[V2G4-049] The external function for XML security shall provide a mean to verify a certificate chain up to the root CA. This function shall use a given certificate chain and a root CA for verification. It shall return whether verification was successful or otherwise.

[V2G4-050] The external function for XML security shall provide a mean to generate a GenChallenge value.

7.7.11.3 ECDH requirements for XML security

[V2G4-051] The external function for XML security shall provide a mean to calculate a shared secret based on ECDH. This function shall use a given certificate and a Diffie-Hellman public key.

[V2G4-052] The external function for XML security shall provide a mean to decrypt a private key based on ECDH. This function shall use a given shared secret and an encrypted private key.

7.7.11.4 Certificate handling requirements for XML security

[V2G4-053] The external function for XML security shall provide a mean to load a certificate encoded as X509CertificateType (refer to Annex P.7). This function shall use a given unique PKI and certificate name according to 7.7.8.

[V2G4-054] The external function for XML security shall provide a mean to load a private key related to a certificate. This function shall use a given unique certificate name according to 7.7.8.

[V2G4-055] The external function for XML security shall provide a mean to load the EMAID of the contract certificate.

7.7.11.5 SA requirements for XML security

[V2G4-056] The external function for XML security shall provide a mean to verify the authenticity of the OEMProvisioning leaf certificate by the SA. It shall return whether verification was successful or otherwise.

[V2G4-057] The external function for XML security shall provide a mean to update the contract certificate by the SA. It shall return whether verification was successful or otherwise.

[V2G4-058] The external function for XML security shall provide a mean to get the SAProvisioning certificate chain from the SA encoded as CertificateChainType (refer to Annex P.7). This function shall use a given OEMProvisioning leaf or contract certificate.

[V2G4-059] The external function for XML security shall provide a mean to get the contract certificate chain encoded from the SA as CertificateChainType (refer to Annex P.7). This function shall use a given OEMProvisioning leaf or contract certificate.

[V2G4-060] The external function for XML security shall provide a mean to get the contract signature encrypted private key from the SA encoded as ContractSignatureEncryptedPrivateKeyType (refer to Annex P.7). This function shall use a given OEMProvisioning leaf or contract certificate.

[V2G4-061] The external function for XML security shall provide a mean to get the Diffie-Hellman public key from the SA encoded as DiffieHellmanPublickeyType (refer to Annex P.7). This function shall use a given OEMProvisioning leaf or contract certificate.

[V2G4-062] The external function for XML security shall provide a mean to get the EMAID of a contract certificate from the SA encoded as EMAIDType (refer to Annex P.7). This function shall use a given OEMProvisioning leaf or contract certificate.

[V2G4-063] The external function for XML security shall provide a mean to get the signature value for the signed message parts ContractSignatureCertChain, ContractSignatureEncryptedPrivateKey,

DHpublickey and eMAID (refer to Annex P.7) from the SA. This function shall use a given OEMProvisioning leaf or contract certificate.

7.7.12 EIM status control functionality

7.7.12.1 General information

To ensure EIM authorization, the MTC is able to detect and control EIM status information by using special functions depending on the MTC's type (SECC_Tester).

The parallel test component (PTC) for EIM status continuously observes the status of the EIM authorization until the authorization process is successful or failed.

7.7.12.2 Requirements of EIM status control for SECC testing

[V2G4-064] The service function for EIM status control shall provide a mean to initiate the EIM authorization.

[V2G4-065] The service function for EIM status control shall provide a mean to process incoming EIM status information from the EIM status PTC.

7.7.12.3 Requirements of EIM status PTC for SECC testing

[V2G4-066] The EIM status PTC for SECC testing shall provide a function to inform the MTC if the EIM authorization is successful. If no change event occurs within a given time [ms], the function shall report an error.

8 Test case descriptions for 15118-2 V2GTP

8.1 General information

This clause covers all test case descriptions for the *V2GTP requirements* as specified in ISO 15118-2. Sub clause 8.2 details all test case descriptions, where the *SECC* is the SUT. Sub clause 8.3 details all test case descriptions, where the *EVCC* is the SUT.

8.2 SECC test cases

Table **39 - Test case description for 'TC_SECC_CMN_VTB_V2GTPSessionSetup_001'**

TC Id	TC_SECC_CMN_VTB_V2GTPSessionSetup_001
Test objective	Test System executes GoodCase procedure and sends a SessionSetupReq message with the V2GTP header information 'protocolVersion' equals to '0x01'H, 'invProtocolVersion' equals to 'FE'H and 'payloadType' equals to '0x8001'H. (V2GTP Header is matched for V2G message content). Test System then checks that the SUT sends a SessionSetupRes message with the V2GTP header information 'protocolVersion' equals to '0x01'H, 'invProtocolVersion' equals to 'FE'H and 'payloadType' equals to '0x8001'H.

9 Test case descriptions for 15118-2 SDP messages

9.1 General information

This clause covers all test case descriptions for the *SDP requirements* as specified in ISO 15118-2. Sub clause 9.2 details all test case descriptions, where the *SECC* is the SUT. Sub clause 9.3 details all test case descriptions, where the *EVCC* is the SUT.

9.2 SECC test cases

Table **59 - Test case description for 'TC_SECC_CMN_VTB_SDP_001'**

TC Id	TC_SECC_CMN_VTB_SDP_001
Test objective	Test System executes GoodCase procedure and sends an SDP request message with 'Security' equals to '0x10'H and 'TransportProtocol' equals to '0x00'H. Test System then checks that the SUT sends an SDP response message with 'Security' equals to '0x10'H, 'TransportProtocol' equals to '0x00'H and a valid port and IP address.

9.3.2 AC specific test cases

Table **73 - Test case description for 'TC_EVCC_AC_VTB_SDP_001'**

TC Id	TC_EVCC_AC_VTB_SDP_001
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating an oscillator B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure, starts SDP server and counts the number of SDP request messages without sending an SDP response message. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT repeats sending SDP request messages '50' times. The SUT shall stop sending SDP requests after 50 iterations. Furthermore the Test System checks the reset of the message counter after the previous SDP process.

Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure, starts SDP server and counts the number of SDP request messages without sending an SDP response message. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT repeats sending SDP request messages '50' times. The SUT shall stop sending SDP requests after 50 iterations. Furthermore the Test System checks the reset of the message counter after the previous SDP process.

9.3.3 DC specific test cases

Table **89 - Test case description for 'TC_EVCC_DC_VTB_SDP_001'**

TC Id	TC_EVCC_DC_VTB_SDP_001
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating 5% duty cycle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure, starts SDP server and counts the number of SDP request messages without sending an SDP response message. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT repeats sending SDP request messages '50' times. The SUT shall stop sending SDP requests after 50 iterations. Furthermore the Test System checks the reset of the message counter after the previous SDP process.

After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure, starts SDP server and counts the number of SDP request messages without sending an SDP response message. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT repeats sending SDP request messages '50' times. The SUT shall stop sending SDP requests after 50 iterations. Furthermore the Test System checks the reset of the message counter after the previous SDP process.

10 Test case descriptions for 15118-2 V2G application layer messages

10.1 General information

This clause covers all test case descriptions for the *V2G Application layer message requirements* as specified in ISO 15118-2.

10.2 SECC test cases

10.2.1 General information

This sub clause covers all V2G Application layer test case descriptions, where the SUT is the *SECC*.

10.2.2 V2G protocol handshake

10.2.2.1 General information

This sub clause covers the *V2G protocol handshake* test case descriptions, where the SUT is the SECC.

10.2.2.2 SECC test cases for SupportedAppProtocol

Table **105 - Test case description for 'TC_SECC_CMN_VTB_SupportedAppProtocol_001'**

TC Id	TC_SECC_CMN_VTB_SupportedAppProtocol_001
Test objective	Test System executes GoodCase procedure and sends a SupportedAppProtocolReq message with a list of valid AppProtocols including ISO namespace and all additional mandatory parameters. Test System then checks that the SUT sends a SupportedAppProtocolRes message with ResponseCode 'OK_SuccessfulNegotiation' or 'OK_SuccessfulNegotiationWithMinorDeviation' and all additional mandatory parameters.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 8.2.1; 8.2.2; 8.2.3; 8.8.4.3.1; 7.4; 8.6.2.3.1; 8.6.2.3.2; 8.6.2.4.1; 8.6.2.4.2; 7.3.4; 8.6.2.1; 8.7.4.4; 7.7.3.4; 7.10.1.7; 7.7.3.3; 8.7.4.3

Table **108 - Test case description for 'TC_SECC_CMN_VTB_SupportedAppProtocol_005'**

TC Id	TC_SECC_CMN_VTB_SupportedAppProtocol_005
Test objective	Test System executes GoodCase procedure and waits until the 'V2G_SECC_CommunicationSetup_Timeout' timer has expired on SUT side. Test System then checks that the SUT stops waiting for establishing the TCP/TLS connection and does not respond to a TCP/TLS handshake request.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 15118-2.7.4; 8.7.3.1

10.2.3.3.1 Common test cases

Table **110 - Test case description for 'TC_SECC_CMN_VTB_SessionSetup_001'**

TC Id	TC_SECC_CMN_VTB_SessionSetup_001
Test objective	Test System executes GoodCase procedure and sends a SessionSetupReq message with SessionID '0', valid EvccID and all additional mandatory parameters. Test System then checks that the SUT sends a SessionSetupRes message with a new SessionID, ResponseCode 'OK_NewSessionEstablished', valid EvseId and all additional mandatory parameters.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 8.3.2; 8.3.3; 8.3.4; 8.4.2; 8.4.3.2.1; 8.8.3.1; 8.8.4.3; 8.6.2.3.1; 8.6.2.3.2; 8.6.2.4.1; 8.6.2.4.2; 7.3.4; 8.6.2.1; 8.7.4.4; 8.7.4.3

Table **111 - Test case description for 'TC_SECC_CMN_VTB_SessionSetup_002'**

TC Id	TC_SECC_CMN_VTB_SessionSetup_002
Test objective	Test System executes GoodCase procedure and sends a valid ServiceDiscoveryReq message instead of a SessionSetupReq message. Test System then checks that the SUT sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'FAILED_SequenceError' and only additional mandatory parameters without optional parameters. The test system then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 8.3.2; 8.3.3; 8.3.4; 15118-2.7.4; 8.4.2; 8.4.3.2.1; 8.4.3.3.3; 8.8.3.1; 8.8.4.3; 8.8.4.3.1

10.2.3.3.2 AC specific test cases

Table **113 - Test case description for 'TC_SECC_AC_VTB_SessionSetup_001'**

TC Id	TC_SECC_AC_VTB_SessionSetup_001
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a SessionSetupReq message with the previous sessionID, valid EvccID and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a SessionSetupRes message with the previous SessionID, ResponseCode 'OK_OldSessionJoined', valid EvseId and all additional mandatory parameters.

10.2.3.3.3 DC specific test cases

Table **119 - Test case description for 'TC_SECC_DC_VTB_SessionSetup_001'**

TC Id	`TC_SECC_DC_VTB_SessionSetup_001`
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a SessionSetupReq message with the previous sessionID, valid EvccID and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a SessionSetupRes message with the previous SessionID, ResponseCode 'OK_OldSessionJoined', valid EvseId and all additional mandatory parameters.

Table **129 - Test case description for 'TC_SECC_AC_VTB_ServiceDiscovery_001'**

TC Id	`TC_SECC_AC_VTB_ServiceDiscovery_001`
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a ServiceDiscoveryReq message with the current SessionID and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'Ok', all additional mandatory parameters and the PaymentOption and ChargeService which was selected by the EVCC in the previous session.

Table **151 - Test case description for 'TC_SECC_CMN_VTB_PaymentServiceSelection_007'**

TC Id	TC_SECC_CMN_VTB_PaymentServiceSelection_007
Test objective	Test System executes GoodCase procedure and sends a PaymentServiceSelectionReq message with the current SessionID, SelectedPaymentOption, all additional mandatory parameters and with a ServiceID value equal to 2, but no charge service ID (ServiceID = 1). Test System then checks that the SUT sends a PaymentServiceSelectionRes message with the current SessionID, ResponseCode 'FAILED_NoChargeServiceSelected' and only additional mandatory parameters without optional parameters. The test system then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 15118-2.7.4; 8.3.2; 8.3.3; 8.3.4; 8.4.3.5.3; 8.8.3.1

10.2.3.9 SECC test cases for Authorization

10.2.3.9.1 General information

The following sub clauses include all *V2G Authorization message* test case descriptions, where the SUT is the SECC.

10.2.3.9.2 Common test cases

Table **165 - Test case description for 'TC_SECC_CMN_VTB_Authorization_001'**

TC Id	TC_SECC_CMN_VTB_Authorization_001
Test objective	Test System executes GoodCase procedure and sends an AuthorizationReq message with the current SessionID and all additional mandatory parameters. Test System then checks that the SUT sends an AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished' and all additional mandatory parameters. If a valid AuthorizationRes message with EVSEProcessing 'Ongoing_WaitingForCustomerInteraction' was received before, the Test System sends another AuthorizationReq message. This message sequence will be repeated until the authorization has finished or 'V2G_EVCC_Ongoing_Timer' has expired.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 8.3.2; 8.3.3; 8.3.4; 8.4.3.7.2; 8.7.4.2; 8.8.4.3.1; 8.6.2.3.1; 8.6.2.4.1; 8.8.3.1; 7.3.4; 8.6.2.1; 8.7.4.4

TC Id	TC_SECC_CMN_VTB_Authorization_014
Test objective	Test System executes GoodCase procedure and sends an AuthorizationReq message with the current SessionID and all additional mandatory parameters. Test System then checks that the SUT sends an AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Ongoing_WaitingForCustomerInteraction' and all additional mandatory parameters. Furthermore the repetition of the Authorization message sequence will be checked (EVSEProcessing := 'Ongoing_WaitingForCustomerInteraction') until the 'V2G_SECC_Ongoing_Timer' has expired on SUT side. Test system then checks that the SUT sends a AuthorizationRes message with the current SessionID, ResponseCode 'FAILED' and all additional mandatory parameters and terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'. For this test case the user shall not execute the authorization by a customer interaction to provoke the timeout.

Table **200 - Test case description for 'TC_SECC_AC_VTB_ChargeParameterDiscovery_017'**

TC Id	TC_SECC_AC_VTB_ChargeParameterDiscovery_017
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple, a DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList, all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **201 - Test case description for 'TC_SECC_AC_VTB_ChargeParameterDiscovery_018'**

TC Id	`TC_SECC_AC_VTB_ChargeParameterDiscovery_018`
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple, a DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **212 - Test case description for 'TC_SECC_AC_VTB_ChargeParameterDiscovery_029'**

TC Id	TC_SECC_AC_VTB_ChargeParameterDiscovery_029
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple and DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList, all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **213 - Test case description for 'TC_SECC_AC_VTB_ChargeParameterDiscovery_030'**

TC Id	TC_SECC_AC_VTB_ChargeParameterDiscovery_030
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple and DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **218 - Test case description for 'TC_SECC_AC_VTB_ChargeParameterDiscovery_035'**

TC Id	TC_SECC_AC_VTB_ChargeParameterDiscovery_035
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, a MaxEntriesSAScheduleTuple, a DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff (MaxEntriesSAScheduleTuple is considered) all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **226 - Test case description for 'TC_SECC_DC_VTB_ChargeParameterDiscovery_007'**

TC Id	TC_SECC_DC_VTB_ChargeParameterDiscovery_007
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple and DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList, all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Test objective	Test System executes GoodCase procedure and sends a ChargeParameterDiscoveryReq message with the current SessionID, a valid RequestedEnergyTransferType, a MaxEntriesSAScheduleTuple, without DepartureTime and all additional mandatory parameters. Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff (MaxEntriesSAScheduleTuple is considered) and all additional mandatory parameters. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **233 - Test case description for 'TC_SECC_DC_VTB_ChargeParameterDiscovery_014'**

TC Id	TC_SECC_DC_VTB_ChargeParameterDiscovery_014
Test objective	Test System executes GoodCase procedure and sends a ChargeParameterDiscoveryReq message with the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple, a DepartureTime and all additional mandatory parameters. Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Ongoing', a valid scheduleList and all additional mandatory parameters. Furthermore the repetition of the ChargeParameterDiscovery message sequence will be checked (EVSEProcessing := 'Ongoing') until the 'V2G_SECC_Ongoing_Timer' has expired on SUT side. Test system then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'FAILED' and all additional mandatory parameters and terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

Table **239 - Test case description for 'TC_SECC_DC_VTB_ChargeParameterDiscovery_020'**

TC Id	TC_SECC_DC_VTB_ChargeParameterDiscovery_020
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating a BCB toggle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional) and B1/B2 transition. Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, a MaxEntriesSAScheduleTuple, without DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff (MaxEntriesSAScheduleTuple is considered) all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **244 - Test case description for 'TC_SECC_DC_VTB_ChargeParameterDiscovery_025'**

TC Id	TC_SECC_DC_VTB_ChargeParameterDiscovery_025
Test objective	Test System executes GoodCase procedure, initiates a renegotiation and sends a new ChargeParameterDiscoveryReq message with the current SessionID, a valid RequestedEnergyTransferType, a MaxEntriesSAScheduleTuple, without DepartureTime and all additional mandatory parameters. Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList (MaxEntriesSAScheduleTuple is considered) and all additional mandatory parameters. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Table **251 - Test case description for 'TC_SECC_DC_VTB_ChargeParameterDiscovery_032'**

TC Id	TC_SECC_DC_VTB_ChargeParameterDiscovery_032
Test objective	Test System executes GoodCase procedure and initiates a paused V2G communication session by sending a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After receipt of a valid SessionStopRes message, Test System checks that the SUT turns off the oscillator for the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System then executes Goodcase procedure and sends a ChargeParameterDiscoveryReq message the current SessionID, a valid RequestedEnergyTransferType, without MaxEntriesSAScheduleTuple, a DepartureTime and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList and salesTariff all additional mandatory parameters and the SAScheduleTuple which was selected by the EVCC in the previous session. If a valid ChargeParameterDiscoveryRes message with EVSEProcessing 'Ongoing' was received before, the Test System sends another ChargeParameterDiscoveryReq message. This message sequence will be repeated until the processing of the charging information has finished or 'V2G_EVCC_Ongoing_Timer' has expired.

Test objective	Test System executes GoodCase procedure and waits until the 'V2G_Sequence_Timeout' timer has expired after receiving a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

Table **332 - Test case description for 'TC_SECC_AC_VTB_ChargingStatus_005'**

TC Id	TC_SECC_AC_VTB_ChargingStatus_005
Test objective	Test System executes GoodCase procedure and waits until the 'V2G_Sequence_Timeout' timer has expired after receiving a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.
Document reference	Document: ISO:15118-2:2014:IS Section(s): 15118-2.7.4; 8.8.4.3.1; 8.7.2.1; 8.7.2.3

Table **356 - Test case description for 'TC_SECC_DC_VTB_CableCheck_003'**

TC Id	TC_SECC_DC_VTB_CableCheck_003
Test objective	Test System executes GoodCase procedure, signals CP State C or D and sends a valid ServiceDiscoveryReq message instead of a CableCheckReq message. Test System then checks that the SUT sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'FAILED_SequenceError' and only additional mandatory parameters without optional parameters. The test system then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

10.2.3.18.2 DC specific test cases

Table **362 - Test case description for 'TC_SECC_DC_VTB_PreCharge_001'**

TC Id	TC_SECC_DC_VTB_PreCharge_001
Test objective	Test System executes GoodCase procedure and sends a PreChargeReq message with the current SessionID, target voltage and current and all additional mandatory parameters. Test System then checks that the SUT sends a PreChargeRes message with the current SessionID, ResponseCode 'OK', EVSEStatusCode 'EVSE_Ready' and all additional mandatory parameters. If the Test System sends another valid PreChargeReq message, the SUT shall respond to this request message again. This message sequence will be repeated until the required voltage has been reached or 'V2G_EVCC_PreCharge_Timer' has expired.

Table 368 lists the test case description for 'TC_SECC_DC_VTB_CurrentDemand_003'.

Table **369 - Test case description for 'TC_SECC_DC_VTB_CurrentDemand_004'**

TC Id	TC_SECC_DC_VTB_CurrentDemand_004
Test objective	Test System executes GoodCase procedure and sends a CurrentDemandReq message with an unknown SessionID, target voltage and current and all additional mandatory parameters. Test System then checks that the SUT sends a CurrentDemandRes message with a valid SessionID, ResponseCode 'FAILED_UnknownSession' and only additional mandatory parameters without optional parameters. The test system then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

TC Id	TC_SECC_DC_VTB_WeldingDetection_003
Test objective	Test System executes GoodCase procedure and sends a WeldingDetectionReq message with an invalid SessionID and all additional mandatory parameters. Test System then checks that the SUT sends a WeldingDetectionRes message with a valid SessionID, ResponseCode 'FAILED_UnknownSession' and only additional mandatory parameters without optional parameters. The test system then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

Table **396 - Test case description for 'TC_EVCC_AC_VTB_SessionSetup_001'**

TC Id	TC_EVCC_AC_VTB_SessionSetup_001
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating an oscillator B1/B2 transition and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System then executes Goodcase procedure and sends a SupportedAppProtocolRes message with ResponseCode 'OK_SuccessfulNegotiation', a valid schema and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a correct SessionSetupReq message with the previous SessionID, valid EvccID and all additional mandatory parameters.

10.3.3.6.2 Common test cases

Table **430 - Test case description for 'TC_EVCC_CMN_VTB_ServiceDetailAndPaymentSelection_001'**

TC Id	TC_EVCC_CMN_VTB_ServiceDetailAndPaymentSelection_001
Test objective	Test System executes GoodCase procedure and sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'Ok', PaymentOption 'Contract', valid SupportedEnergyTransferMode and ServiceList and all additional mandatory parameters. Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, SelectedPaymentOption 'Contract', valid ServiceID and all additional mandatory parameters. If a ServiceDetailReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

TC Id	TC_EVCC_CMN_VTB_ServiceDetailAndPaymentSelection_010
Test objective	Test System executes GoodCase procedure and sends a valid AuthorizationRes message instead of PaymentServiceSelectionRes message. Test System then checks that the SUT applies CP State B within 'par_EVCC_StateB_Shutdown_Timeout' (if not already applied) and terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

Table **449 - Test case description for 'TC_EVCC_AC_VTB_ServiceDetailAndPaymentSelection_008'**

TC Id	`TC_EVCC_AC_VTB_ServiceDetailAndPaymentSelection_008`
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the second Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'Ok', PaymentOption 'ExternalPayment', valid SupportedEnergyTransferMode and ServiceList and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters. If a ServiceDetailReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

Table **456 - Test case description for 'TC_EVCC_DC_VTB_ServiceDetailAndPaymentSelection_007'**

TC Id	TC_EVCC_DC_VTB_ServiceDetailAndPaymentSelection_007
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the second Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'Ok', PaymentOption 'Contract', valid SupportedEnergyTransferMode and ServiceList and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters. If a ServiceDetailReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

Table **472 - Test case description for 'TC_EVCC_AC_VTB_PaymentServiceSelection_011'**

TC Id	TC_EVCC_AC_VTB_PaymentServiceSelection_011
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the first Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDetailRes message with the current SessionID, ResponseCode 'OK', requested ServiceID and all additional mandatory parameters. If another ServiceDetailReq message is received, Test System then sends a new valid ServiceDetailRes message with the corresponding ServiceID. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters.

TC Id	`TC_EVCC_DC_VTB_PaymentServiceSelection_001`
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PICS_CMN_CMN_WakeUp' Test System resumes the previously paused session by initiating 5% duty cycle and waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDetailRes message with the current SessionID, ResponseCode 'OK', requested ServiceID and all additional mandatory parameters. If another ServiceDetailReq message is received, Test System then sends a new valid ServiceDetailRes message with the corresponding ServiceID. The value for 'PICS_CMN_CMN_WakeUp' should be in the range of [10.0s - 60.0s] to avoid any SUT-initiated wake-up Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters.

Table **487 - Test case description for 'TC_EVCC_DC_VTB_PaymentServiceSelection_009'**

TC Id	TC_EVCC_DC_VTB_PaymentServiceSelection_009
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the first Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDetailRes message with the current SessionID, ResponseCode 'OK', requested ServiceID and all additional mandatory parameters. If another ServiceDetailReq message is received, Test System then sends a new valid ServiceDetailRes message with the corresponding ServiceID. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters.

Table **494 - Test case description for 'TC_EVCC_DC_VTB_PaymentServiceSelection_016'**

TC Id	TC_EVCC_DC_VTB_PaymentServiceSelection_016
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the second Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a ServiceDiscoveryRes message with the current SessionID, ResponseCode 'Ok', PaymentOption 'ExternalPayment', valid SupportedEnergyTransferMode and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct PaymentServiceSelectionReq message with the current SessionID, the previous SelectedPaymentOption, valid ServiceID and all additional mandatory parameters.

TC Id	TC_EVCC_CMN_VTB_CertificateUpdate_001
Test objective	Test System executes GoodCase procedure and sends a PaymentServiceSelectionRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT sends a correct CertificateUpdateReq message with a valid signature, current SessionID, contract certificate chain, valid EMAID and all additional mandatory parameters.

10.3.3.10.2 Common test cases

Table **521 - Test case description for 'TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_001'**

TC Id	TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_001
Test objective	Test System executes GoodCase procedure and sends a PaymentServiceSelectionRes with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT sends a correct PaymentDetailsReq message with the current SessionID, valid EMAID, contract certificate chain and all additional mandatory parameters. If a valid CertificateInstallationReq or CertificateUpdateReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

Table **523 - Test case description for 'TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_003'**

TC Id	TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_003
Test objective	Test System executes GoodCase procedure and turns off the oscillator before sending a PaymentDetailsRes message with the current SessionID, ResponseCode 'FAILED_SequenceError' and all additional mandatory parameters. Test System then checks that the SUT applies CP State B within 'par_EVCC_StateB_Shutdown_Timeout' (if not already applied) and terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout'.

Table **527 - Test case description for 'TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_007'**

TC Id	TC_EVCC_CMN_VTB_CertificateHandlingAndPaymentDetails_007
Test objective	Test System executes GoodCase procedure, signals CP State E, waits for 0.5s and sends a PaymentDetailsRes message with the current SessionID, ResponseCode 'OK', valid GenChallenge and all additional mandatory parameters. Test System then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' as soon as CP State E is applied. If the TCP connection is closed before the corresponding request message is sent by the Test System, the send operation shall be canceled and the test result shall be interpreted as successful.

Table **565 - Test case description for 'TC_EVCC_AC_VTB_ChargeParameterDiscovery_018'**

TC Id	`TC_EVCC_AC_VTB_ChargeParameterDiscovery_018`
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'PIXIT_CMN_CMN_WakeUp' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished' and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time for the SUT-initiated wake-up (PIXIT_CMN_CMN_WakeUp) Test System then checks that the SUT sends a correct ChargeParameterDiscoveryReq message with the current SessionID, the previous RequestedEnergyTransferMode and all additional mandatory parameters.

Table **573 - Test case description for 'TC_EVCC_AC_VTB_ChargeParameterDiscovery_026'**

TC Id	TC_EVCC_AC_VTB_ChargeParameterDiscovery_026
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the second Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished' and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct ChargeParameterDiscoveryReq message with the current SessionID, the previous RequestedEnergyTransferMode, a DepartureTime and all additional mandatory parameters.

Table **586 - Test case description for 'TC_EVCC_DC_VTB_ChargeParameterDiscovery_013'**

TC Id	TC_EVCC_DC_VTB_ChargeParameterDiscovery_013
Test objective	Test System executes GoodCase procedure, initiates a renegotiation and sends a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters if a PowerDeliveryReq message with the current SessionID, ChargeProgress 'renegotiate' and all additional mandatory parameters was received before. Test System then checks that the SUT sends a correct ChargeParameterDiscoveryReq message with the current SessionID, a valid RequestedEnergyTransferType, without a DepartureTime and all additional mandatory parameters.

Table **594 - Test case description for 'TC_EVCC_DC_VTB_ChargeParameterDiscovery_021'**

TC Id	`TC_EVCC_DC_VTB_ChargeParameterDiscovery_021`
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the first Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished' and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct ChargeParameterDiscoveryReq message with the current SessionID, the previous RequestedEnergyTransferMode and all additional mandatory parameters.

Table **595 - Test case description for 'TC_EVCC_DC_VTB_ChargeParameterDiscovery_022'**

TC Id	TC_EVCC_DC_VTB_ChargeParameterDiscovery_022
Test objective	Test System executes GoodCase procedure and waits for a paused V2G communication session by receiving a SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the first Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). After sending of a valid SessionStopRes message, Test System turns off the CP oscillator to reach X1 state and checks whether the SUT signals CP State B within the entire sleeping phase. After 'par_SECC_Pmax0W' the SUT resumes the previously paused session by initiating a BCB toggle. Furthermore Test System waits for successful link detection (old logical network parameter) if the data link was terminated before (Unpowering the low-layer communication module is optional). Test System executes GoodCase procedure and sends a AuthorizationRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished' and all additional mandatory parameters. The value for 'PICS_CMN_CMN_WakeUp' shall be set to a higher value than the time interval for a Pmax element equals to 0W within SAScheduleList (par_SECC_Pmax0W) Test System then checks that the SUT sends a correct ChargeParameterDiscoveryReq message with the current SessionID, the previous RequestedEnergyTransferMode, without a DepartureTime and all additional mandatory parameters.

Table **617 - Test case description for 'TC_EVCC_AC_VTB_PowerDelivery_018'**

TC Id	TC_EVCC_AC_VTB_PowerDelivery_018
Test objective	Test System executes GoodCase procedure and sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList including three SAScheduleTuples with three different price levels within the corresponding sales tariffs and all additional mandatory parameters. Test System then checks that the SUT sends a correct PowerDeliveryReq message with the current SessionID, ChargeProgress 'Start_', an optimized charging profile including the SAScheduleTuple of the sales tariff with the lowest price level and all additional mandatory parameters. Furthermore Test System checks that the SUT applies CP State C or D within 'V2G_SECC_CPState_Detection_Timeout' afterwards.

Table **626 - Test case description for 'TC_EVCC_AC_VTB_PowerDelivery_027'**

TC Id	TC_EVCC_AC_VTB_PowerDelivery_027
Test objective	Test System executes GoodCase procedure, waits for a renegotiation process and sends a ChargeParameterDiscoveryRes message with the current SessionID, ResponseCode 'OK', EVSEProcessing 'Finished', a valid scheduleList including three SAScheduleTuples with three different price levels and all additional mandatory parameters. Test System then checks that the SUT sends a correct PowerDeliveryReq message with the current SessionID, ChargeProgress 'Start_', a charging profile including the default SAScheduleTuple and all additional mandatory parameters.

10.3.3.15.2 AC specific test cases

Table **633 - Test case description for 'TC_EVCC_AC_VTB_SessionStop_001'**

TC Id	TC_EVCC_AC_VTB_SessionStop_001
Test objective	Test System executes GoodCase procedure and sends a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'StopCharging' and all additional mandatory parameters. Test System then checks that the SUT applies CP State B, sends a correct SessionStopReq message with the current SessionID and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before. If the SessionStopReq message contains ChargingSession 'Terminate', the termination of the data link connection within 'par_T_match_leave' will be checked.

TC Id	TC_EVCC_AC_VTB_SessionStop_016
Test objective	Test System executes GoodCase procedure and sends a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'StopCharging' and all additional mandatory parameters (Test System has sent a PmaxScheduleList with the first Pmax element = 0W (par_SECC_Pmax0W) within ChargeParameterDiscoveryRes message before). Test System then checks that the SUT applies CP State B, sends a correct SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before.

Table **659 - Test case description for 'TC_EVCC_DC_VTB_SessionStop_007'**

TC Id	TC_EVCC_DC_VTB_SessionStop_007
Test objective	Test System executes GoodCase procedure and sends a WeldingDetectionRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT sends a correct SessionStopReq message with the current SessionID, ChargingSession 'Terminate' and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before. Afterwards the termination of the data link connection within 'par_T_match_leave' will be checked.

Table **669 - Test case description for 'TC_EVCC_DC_VTB_SessionStop_017'**

TC Id	TC_EVCC_DC_VTB_SessionStop_017
Test objective	Test System executes GoodCase procedure and sends a WeldingDetectionRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters. Test System then checks that the SUT sends a correct SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before.

10.3.3.17.2 AC specific test cases

Table **691 - Test case description for 'TC_EVCC_AC_VTB_ChargingLoopAcOrPowerDelivery_001'**

TC Id	TC_EVCC_AC_VTB_ChargingLoopAcOrPowerDelivery_001
Test objective	Test System executes GoodCase procedure and sends a ChargingStatusRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'None_' and all additional mandatory parameters. This process will be continued for 'PICS_CMN_CMN_LoopCounter' message sequences if a new valid ChargingStatusReq message was received afterwards. In the last sequence EVSENotification will be changed to 'StopCharging'. Test System then checks that the SUT sends a correct PowerDeliveryReq message with the current SessionID, ChargeProgress 'Stop_' and all additional mandatory parameters. Furthermore Test System checks that the SUT applies CP State B within 'V2G_SECC_CPState_Detection_Timeout' afterwards.

TC Id	TC_EVCC_AC_VTB_ChargingLoopAcOrPowerDelivery_002
Test objective	Test System executes GoodCase procedure and sends a ChargingStatusRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'None_' and all additional mandatory parameters. Furthermore Test System sends a MeteringReceiptRes message with the current SessionID, ResponseCode 'Ok' and all additional mandatory parameters if a valid MeteringReceiptReq message was received before. This process will be continued for 'PICS_CMN_CMN_LoopCounter' message sequences if a new valid ChargingStatusReq message was received afterwards. In the last charging loop sequence EVSENotification will be changed to 'StopCharging'. Test System then checks that the SUT sends a correct PowerDeliveryReq message with the current SessionID, ChargeProgress 'Stop_' and all additional mandatory parameters after receiving a MeteringReceiptRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'None_' and all additional mandatory parameters. Furthermore Test System checks that the SUT applies CP State B within 'V2G_SECC_CPState_Detection_Timeout' afterwards.

10.3.3.18 EVCC test cases for MeteringReceipt

10.3.3.18.1 General information

The following sub clauses include all *V2G MeteringReceipt message* test case descriptions, where the SUT is the EVCC.

10.3.3.18.2 AC specific test cases

Table **705 - Test case description for 'TC_EVCC_AC_VTB_MeteringReceipt_001'**

TC Id	TC_EVCC_AC_VTB_MeteringReceipt_001
Test objective	Test System executes GoodCase procedure and sends a ChargingStatusRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'None_', ReceiptRequired 'true', SAScheduleTupleId and all additional mandatory parameters. Test System then checks that the SUT sends a correct MeteringReceiptReq message with a valid signature, current sessionID, a MeterInfo and all additional mandatory parameters.

Test System then checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' as soon as CP State F is applied. If the TCP connection is closed before the corresponding request message is sent by the Test System, the send operation shall be canceled and the test result shall be interpreted as successful.

10.3.3.25.2 DC specific test cases

Table **818 - Test case description for 'TC_EVCC_DC_VTB_WeldingDetectionOrSessionStop_001'**

TC Id	TC_EVCC_DC_VTB_WeldingDetectionOrSessionStop_001
Test objective	Test System executes GoodCase procedure and sends a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'StopCharging' and all additional mandatory parameters. Test System then checks that the SUT applies CP State B, sends a correct SessionStopReq message with the current SessionID and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before. If the SessionStopReq message contains ChargingSession 'Terminate', the termination of the data link connection within 'par_T_match_leave' will be checked. If a valid WeldingDetectionReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

Table **829 - Test case description for 'TC_EVCC_DC_VTB_WeldingDetectionOrSessionStop_012'**

TC Id	TC_EVCC_DC_VTB_WeldingDetectionOrSessionStop_012
Test objective	Test System executes GoodCase procedure and sends a PowerDeliveryRes message with the current SessionID, ResponseCode 'OK', EVSENotification 'StopCharging' and all additional mandatory parameters. Test System then checks that the SUT applies CP State B, sends a correct SessionStopReq message with the current SessionID, ChargingSession 'Pause' and all additional mandatory parameters. Furthermore Test System checks that the SUT terminates the V2G communication session by closing the TCP connection within 'par_CMN_TCP_Connection_Termination_Timeout' if a SessionStopRes message with the current SessionID, ResponseCode 'OK' and all additional mandatory parameters was received before. If a valid WeldingDetectionReq message was received before, the corresponding message sequence shall be executed by SUT and Test System previously.

11 Reliability and Robustness Testing

11.1 General information

The specified abstact test cases in section 8, 9 and 10 do not include the assessment of performance nor robustness or reliability of an implementation. But reliability and robustness of a conforming implementation is also important for the successful operation of charging infrastructures.

The robustness is the ability of a charging system to cope with errors during execution. Reliability is the ability of a system to function with given environmental conditions, for an amount of time.

This clause covers all additional test case descriptions for reliability and robustness testing.

11.2 SECC test cases

11.2.1 General information

This sub clause covers all reliability test case descriptions, where the SUT is the SECC.

11.2.2 AC specific test cases

Table **838 - Test case description for 'TC_SECC_AC_VTB_Reliability_001'**

TC Id	`TC_SECC_AC_VTB_Reliability_001`
Test objective	Test System initiates a plug-in, executes GoodCase procedure and enters the AC charging process for 2 min. Afterwards, Test System stops the charging process for a non-critical reason, initiates a plug-out and waits for 20s. This process will be executed 20 times. Test System checks that the SUT is able to charge for 2 min. Furthermore, Test System checks that this process is successful for 20 times in a row.

Table **839 - Test case description for 'TC_SECC_AC_VTB_Reliability_002'**

TC Id	TC_SECC_AC_VTB_Reliability_002
Test objective	Test System initiates a plug-in, executes GoodCase procedure and enters the AC charging process for 15 min. Afterwards, Test System stops the charging process for a non-critical reason, initiates a plug-out and waits for 20s. This process will be executed 2 times. Test System checks that the SUT is able to charge for 15 min. Furthermore, Test System checks that this process is successful for 2 times in a row.
